CAPECOD REGIONAL POLICY PLAN

FRAMING THE FUTURE

CAPE COD COMMISSION | 2018

CAPE COD REGIONAL POLICY PLAN

December 2018; amended effective March 30, 2021

Barnstable County Ordinance #19-01, #21-03

Approved by the Barnstable County Assembly of Delegates and Barnstable County Commissioners, Barnstable County, Massachusetts

Regional Policy Plan Management: Cape Cod Commission Staff

www.capecodcommission.org

Cape Cod's intrinsic wealth stems from its natural beauty, historic community character, and healthy coastal and freshwater environments. The features that make Cape Cod attractive are also the cause of the forces that threaten to overwhelm the environment and erode its character. The challenge Cape Cod continues to face is balancing the protection of the environment while supporting the residents, workers, and visitors with the necessary services and infrastructure to thrive over the long term. The 2018 Regional Policy Plan helps provide a framework for guiding how and where the region will grow while protecting those unique Cape assets that cannot be replaced.

As described in Section 1, the Cape Cod Commission is
Barnstable County's regional planning and regulatory agency.
Through the Cape Cod Commission Act, the Commission is responsible for balancing the protection of the region's resources with appropriate development and economic

progress, and one of the ways the Commission does this is preparing and overseeing the implementation of a regional land use policy plan for the region.

The 2018 Regional Policy Plan is the fifth Regional Policy Plan prepared by the Cape Cod Commission. The first was adopted on September 6, 1991, with updated plans in 1996, 2002, and 2009. The 2018 Regional Policy Plan is an evolution of these previous plans, building on the goals and policies set forth and integrating stakeholder input to better define and characterize current challenges and solutions, as described in Section 2. Stakeholder engagement and two surveys helped identify key areas of concern, such as climate change, affordable housing, preserving the area's natural resources, and protecting regional character, and has helped to shape the regional vision, growth policy, and goals.

A GROWTH POLICY FOR CAPE COD

The Cape Cod Regional Policy Plan provides a growth policy (Section 3) that supports the vision for the future of Cape Cod as a place of vibrant, sustainable, and healthy communities and a protected natural environment.

Growth should be focused in centers of activity and areas supported by adequate infrastructure and guided away from areas that must be protected for ecological, historical or other reasons. Development should be responsive to context allowing for the restoration, preservation and protection of the Cape's unique resources while promoting economic and community resilience.

i

CAPE COD REGIONAL POLICY PLAN

CAPE COD SYSTEMS

This plan is focused around a suite of interrelated systems that comprise Cape Cod: natural, built, and community (Section 4). High quality natural systems, including groundwater, marine water, freshwater, wetlands, open space, and habitat areas, are part of Cape Cod's attraction for residents and visitors. The quality of the environment is intimately linked with the quality of life on Cape Cod, the vibrancy of the regional economy, and the health of the Cape's community systems.

Protecting and enhancing the built environment, including providing infrastructure that supports the region and vibrant activity centers and protects the natural environment, is vital to supporting the Cape's population. The needs of the built environment must be balanced with maintaining the integrity of the region's natural environment.

Cape Cod's community systems, which include the culture, people, and economic activity of the area, are critical for fostering and maintaining vibrant communities and social networks that serve and support the people who live, work, and play in the region.

KEY CHALLENGES FACING THE REGION

In many cases the natural, built, and community systems augment one another and contribute to what makes the Cape a special place, but they also have conflicting needs or functions that must be balanced. The following briefly characterizes the key challenges (Section 5) that help to form the basis for the policies in this Plan:

■ Between 2001 and 2011, the Cape lost more than 2,300 acres of forest cover, with 70% of the loss replaced by development (buildings, driveways, parking lots, etc.). This broad loss of forest cover, and related forest fragmentation,

- negatively affects regional character, as well as the natural functions of cooling, habitat, and carbon storage that tree cover provides, and results in additional stormwater runoff.
- Surface water quality in Cape Cod ponds has been significantly impacted by surrounding development.
- Nearly all development on Cape Cod continues to utilize on-site septic systems that release nitrogen to groundwater, which eventually travels to coastal embayments and results in degraded water quality.
- Cape Cod faces threats due to climate change. The region's 586 miles of vulnerable, tidal shoreline is already at risk due to flooding and erosion. Sea level rise and climate change will further exacerbate these challenges, as well as impact how Cape Cod's ecosystems function.
- More than 40% of the region's inventoried historic buildings over 100 years old have no protection from demolition or alteration of their characterdefining features. Archaeological sites and historically open landscapes are similarly unprotected.

CAPE COD REGIONAL POLICY PLAN

EXECUTIVE SUMMARY

- The Cape Cod housing market does not meet the region's diverse needs. Lower than average wages, higher than average costs, a lack of choice, limited supply, and the demand for seasonal and retiree housing makes housing for the current and future year-round population a high priority. Rental housing is even more limited.
- Existing infrastructure fundamentally limits the region's ability to grow in a way that balances economic and social wellbeing with the protection of natural and cultural resources. The region's rural and suburban development patterns increase the cost of providing infrastructure to these areas and increase the amount of disturbance to the natural environment.

The long-term challenge is to maintain and improve the quality of the environment in the face of ongoing development pressure and environmental and social change to ensure a stable and robust economy into the future.

GOALS AND OBJECTIVES

To meet these challenges, this Regional Policy Plan adopts goals (Section 6) to guide and plan for the future of the region in a manner consistent with the vision and growth policy. The goals and objectives derive from the values and purposes of the Cape Cod Commission Act, preserving and enhancing the region's assets.

Organized around the region's natural, built, and community systems, these goals and objectives form the structure upon which the region's planning work relies, serve as touchstones to guide implementation actions, and set the measures by which the regulatory review process takes place.

COORDINATED REGIONAL AND LOCAL PLANNING

While the Regional Policy Plan is comprehensive in its vision and growth policy and serves as an overarching policy framework, there are certain resources or issues facing the region that require more focused planning efforts. As discussed in Section 7, these more specialized regional plans and programs work in conjunction with the Regional Policy Plan to accomplish local and regional goals. Examples of existing regional plans include the Cape Cod Section 208 Area Wide Water Quality Management Plan, the Comprehensive Economic Development Strategy, the Regional Economic Strategy Executive Team Program, the Regional Transportation Plan, and the Cape Cod Ocean Management Plan.

In addition to coordinating issue-specific plans across the region, the Commission works to coordinate local comprehensive plans with the Regional Policy Plan. The 2018 CAPE COD REGIONAL POLICY PLAN

Regional Policy Plan, along with subsequent revisions to the local comprehensive plan regulations, seeks to encourage adoption of local comprehensive plans consistent with the Cape Cod Commission Act, streamline, accelerate and coordinate the planning and approval process, stimulate the production of more diverse housing types, coordinate public infrastructure investment in centers of activity, and ensure local bylaws are consistent with the Regional Policy Plan.

The Commission is charged under the Cape Cod Commission
Act with anticipating, guiding and coordinating the rate and
location of development with the capital facilities necessary
to support development. To carry out this charge, the
Commission proposes to develop a regional framework
to characterize, quantify, plan, and advocate for regional
infrastructure and facilities. The Regional Capital Plan will focus
on the planning, forecasting, decision making and financial
tools to help communities take advantage of opportunities
for local and regional coordination and collaboration on

capital infrastructure and facilities. Typically, a local capital infrastructure plan is a short-range plan (five to seven years) that lists specific capital projects and purchases needed by the town. At the regional scale, a Regional Capital Plan's objective is to have towns include a broader, more policy-oriented capital infrastructure plan within their local comprehensive plan that is consistent with the Regional Policy Plan and the goals of the Regional Capital Plan. Regional capital planning must be consistent with protecting the region's natural and historic resources, and advancing a balanced economy, housing mix, and social diversity.

There are a number of tools and resources available through the Cape Cod Commission Act that can assist in local and regional planning. Districts of Critical Planning Concern, Development Agreements, Chapter H, and Growth Incentive Zones are all powerful planning tools that provide a community or communities with focused opportunities to address specific planning goals.

CAPE COD PLACETYPES

In addition to different systems, Cape Cod is comprised of many different and unique places. To recognize and support these unique areas, this Regional Policy Plan identifies areas with similar natural and built characteristics as distinct "Placetypes," which serve as a conceptual framework for regional planning and regulation. Eight Placetypes have been identified in Section 8, each with a vision consistent with the region's growth policy, as well as strategies for creating and enhancing their unique characteristics. Following are brief descriptions of the Placetypes.

Natural Areas are generally the region's least developed and most sensitive areas. The vision for these areas is to minimize adverse development impacts to sensitive resource areas, to preserve lands that define Cape Cod's natural landscape and contribute to its scenic character, and to improve the Cape's resilience to severe storms and the effects of climate change.

CAPE COD REGIONAL POLICY PLAN

EXECUTIVE SUMMARY

Rural Development Areas are defined by a high percentage of open lands and sparse building development patterns that contribute to the unique rural and scenic character of the region. The vision for these areas is to ensure that development is located, sited, and scaled appropriately to avoid impacts on scenic and/or cultural resources, and to help maintain the economic diversity that agriculture can provide for the region including opportunities for the continuation of traditional agricultural occupations, and for the availability of locally-grown food.

Suburban Development Areas include residential neighborhoods built primarily between the 1950s and 1990s as well as automobile-oriented commercial and light industrial development established during the same time period. The vision for these areas is to redevelop commercial and industrial Suburban Development Areas consistent with the community's vision to create more concentrated nodes of development,

and to improve their design and function so that they are better integrated into surrounding neighborhoods. The vision for residential Suburban Development Areas is to cluster residential development to reduce the development footprint and provide high-quality open space.

Historic Areas consist of concentrations of historic structures, including local and/or National Register districts located in a small-scale village setting. The vision for these areas is to protect historic resources and to support infill development that respects the form, scale, and character of existing historic areas.

Maritime Areas are clusters of commercial and mixeduse development that contribute to Cape Cod's working waterfronts and harbors. The vision for these areas is to support the fin- and shell-fishing industry as well as other commercial, recreational, educational, and research activities associated with the marine environment, and to protect water dependent trades. Community Activity Centers are areas with a concentration of business activity, community activity, and a compact built environment. The vision for these areas is to accommodate mixed-use and multifamily residential development in a walkable, vibrant area, to preserve historic buildings, and to provide diverse services, shopping, recreation, civic spaces, housing, and job opportunities at a scale of growth and development desired by the community, with adequate infrastructure and pedestrian amenities to support development.

Industrial Activity Centers are lands containing industrial uses that are suitable for future industrial activity as well as emerging industries. Industrial Activity Centers are lands without significant resource constraints, areas with access to major highway corridors, and areas with adequate size to

CAPE COD REGIONAL POLICY PLAN

support industrial uses. The vision for these areas is to support their development as significant employment centers with adequate infrastructure.

Military and Transportation Areas consist of large land areas developed with and devoted to infrastructure such as airports, transfer stations, waste disposal facilities, and Joint Base Cape Cod. The vision for these areas is to support comprehensive master planning with community input, encourage growth of industries appropriate to the diversification of the regional economy, and encourage partnerships for use of shared infrastructure.

REGIONAL REGULATORY REVIEW

The Cape Cod Commission Act charges the Cape Cod Commission with reviewing certain proposed developments which, because of their size or other characteristics, are presumed to have development effects beyond their local communities. These

proposed developments are called Developments of Regional Impact. As Section 9 details, this Regional Policy Plan focuses on the review of developments in relation to their surroundings and the goals and objectives. The Placetype for a given project is established at the outset of regulatory review and provides the lens through which the Commission will review the project. The applicability of goals and objectives may vary based on how projects are classified by Placetype.

The Commission has developed Technical Guidance that contains Placetype Maps, resource areas and Technical Bulletins. There is a Technical Bulletin for each of the goals. These Bulletins set forth the methods by which the goals and objectives may be met. The Cape Cod Commission will use these Technical Bulletins, Placetype Maps and resource areas to determine if a Development of Regional Impact is consistent with the Regional Policy Plan.

REGIONAL PERFORMANCE MEASURES

This Regional Policy Plan identifies nine performance measures in Section 10 to be tracked over time to help illustrate whether the region is moving toward the regional vision articulated in this plan. Though ideally these measures will show positive progress over time, tracking them can also identify areas where additional resources are needed to make progress.

The performance measures that will be tracked include:

- Number of acres of protected BioMap2 Core habitat
- Nitrogen concentration in public drinking water wells
- Parcels connected to the sidewalk network
- Nitrogen concentrations in embayments
- Number of additional or updated historic structure inventory forms

CAPE COD REGIONAL POLICY PLAN

EXECUTIVE SUMMARY

- Activity center evolution
- Share of employment within high-wage industries
- Housing diversity
- Changes in floodplain development
- Greenhouse gas emissions

RECOMMENDED ACTIONS

Section 11 of the Plan includes recommended actions that the Commission commits to undertake over the next five years, including both planning and regulatory efforts to address the region's major challenges. These actions are organized around the natural systems, built systems, and community systems identified in this Plan.

Recommended planning actions for natural systems include identifying and prioritizing land for water supply and supporting local water quality planning. Actions

recommended for built systems include development of a Regional Capital Plan, updating the Cape Cod Regional Transportation Plan, and continuing to support and engage communities around coastal hazard mitigation and climate change adaptation planning, including developing an inventory of greenhouse gas emissions. Actions recommended for community systems include development of a regional housing plan, updating the Comprehensive Economic Development Strategy, updating the local comprehensive plan regulations, improving and updating historic inventories, and continuing to support communities through development of land use decision support tools. The Commission also commits to continuing to coordinate and facilitate information sharing, education and collaboration by hosting the annual One Cape Summit.

Additionally, recommended priority regulatory actions include potential threshold revisions and other amendments to the Commission's Code of Regulations, revisions to regional design guidelines, and updates to Technical Guidance to address climate change.

The 2018 Regional Policy Plan for Cape Cod provides a path forward for sustainable growth and development and streamlined regulation. Implementing this plan will require collaboration and partnerships at various levels of government and with non-governmental organizations, participation by committees and stakeholders, and communication and coordination with private sector industries and businesses.

Together, as One Cape, the region can build environmental and economic resilience, strengthen community relationships, and design regional policies and implementation plans to address its greatest challenges.

INTRODUCTION CAPE COD REGIONAL POLICY PLAN

Introduction

How and where we grow in the next decade will impact the communities of Cape Cod for the next century. With 86% of the region's land already developed or protected, our ability to adapt to an everchanging environmental and economic landscape is imperative. Cape Cod must face its challenges including the need for diverse and affordable housing, wastewater infrastructure that requires billions of dollars to construct, traffic that continues to increase, canal

bridges that are functionally obsolete, potential threats to drinking water quality, and a coastline that is rapidly eroding and significantly diminishing during every coastal storm — if the region is to continue to thrive.

Cape Cod is an intricate web of natural, built, and community systems and our seasonal economy presents both significant challenges and opportunities. With comprehensive regional planning Cape Cod will

solidify its place as a leader in community resilience. By focusing new growth and redevelopment into existing centers of activity with thoughtful design through regional regulatory relief and incentives, we can realize increased density where it makes sense. We can create different sized housing units to accommodate more varied lifestyle needs and the Cape's wide-ranging demographic, as well as provide more access to affordable housing. With a smart approach to growth

we can create more walkable communities, decrease infrastructure costs and generate more year-round and seasonal jobs. We can adapt to the ever-changing nature of retail and the need for higher paying wages and workforce housing to keep our younger professionals and families invested in calling Cape Cod home. We can attract public and private infrastructure investment that adds value to both the seasonal and yearround economies. Cape Cod has the ability to address its

challenges and capitalize on opportunities to improve its future.

Using data and information to measure progress in meeting regional goals will provide
Cape Cod communities with the ability to adapt. Meeting regional housing needs and promoting growth and development in locations with adequate transportation and wastewater infrastructure are priorities critical to the Cape economy. Making the Cape less vulnerable through

policies and strategies that address our evolving shoreline and impacts from climate change and coastal storms is a priority. We must continue to seek and secure additional resources to lessen the financial burden of necessary infrastructure on our 15 Cape communities.

Together, as One Cape, we can build environmental and economic resilience, strengthen community relationships, and design regional policies and

implementation plans to address our greatest challenges. The 2018 Regional Policy Plan for Cape Cod provides a path forward for sustainable growth and development and streamlined regulation, it addresses critical housing needs and eases the local comprehensive planning process, and it provides a framework for coordinated regional capital planning. We must collaborate as a region to keep Cape Cod a special place for decades to come.

CAPE COD REGIONAL POLICY PLAN

What's New in this Plan?

The following are brief descriptions of several new components of the 2018 Regional Policy Plan (RPP) update. Each of these components will play a key role in the Commission's regional planning and regulatory review over the next five years.

- Cape Cod Placetypes
- Identification of Activity
 Centers and Natural Areas
- Goal-Based Context-Sensitive Regulatory Review
- Emphasis on Coordinated Regional and Local Planning
- Climate Change Planning

- Regional Housing Strategy
- Regional Capital Planning
- Streamlined Local Comprehensive Planning
- Regional Performance Measures

CAPE COD PLACETYPES

This RPP identifies eight
Placetypes found and desired
on Cape Cod: Natural Areas,
Rural Development Areas,
Suburban Development Areas,
Historic Areas, Maritime
Areas, Community Activity
Centers, Industrial Activity

Centers, and Military and
Transportation Areas. The
framework of these Placetypes
allows regional land use
policies and regulations to
better respond to and enhance
local form and context and
support development that
complements its surroundings.

IDENTIFICATION OF ACTIVITY CENTERS AND NATURAL AREAS

This RPP identifies two types of regional activity centers:
Community Activity Centers

and Industrial Activity Centers.
Community Activity Centers
are areas with a concentration
of business activity,
community activity, and a
compact built environment.
Community Activity Centers
may be suitable for additional
multi-family housing and a mix
of uses at a scale of growth
and development desired by
the community.

Industrial Activity Centers are areas containing industrial uses that are suitable for future industrial growth including but not limited to light manufacturing,

warehousing and construction services, and emerging industry clusters, such as marine technology.

Both types of activity centers, provided sufficient infrastructure and local regulations exist, may be suitable for certain types of growth and economic development for Barnstable County.

While the 2018 RPP identifies these centers of activity at the regional scale based on existing characteristics, centers of activity also exist or could be envisioned at a neighborhood or local scale. For more information on the geodesign process used to identify activity centers, go to ccc-plans.org/acs.

This RPP also identifies
Natural Areas, which
contain the region's most
important sensitive and
vulnerable resources. This
RPP encourages minimizing
development and its impacts
in these areas to protect the
region's significant resources
and to balance the anticipated
redevelopment and growth in
activity centers.

GOAL-BASED CONTEXT-SENSITIVE REGULATORY REVIEW

The identification of Cape
Cod Placetypes creates a
common understanding of the
different character areas that
are important to defining the
Cape and allows for greater
understanding of a potential
development's context. The
regulatory component of this
RPP update includes goals and
objectives that are applied
to a project through the lens

INTRODUCTION CAPE COD REGIONAL POLICY PLAN

and vision of the Cape Cod Placetype in which a project is located.

EMPHASIS ON COORDINATED REGIONAL AND LOCAL PLANNING

CLIMATE CHANGE PLANNING

Climate change resiliency concepts are found throughout the RPP, incorporated into the growth policy, design, and resource protection policies, as well as in the related regional

and local plans that help put these policies into action and support state and federal planning and resiliency goals. Specifically, this RPP will help reduce Cape Cod's vulnerability and improve resiliency in the face of climate change by promoting development outside of flood zones and vulnerable habitat areas and focusing development in activity centers with adequate wastewater, drinking water, and stormwater infrastructure; fostering walkable neighborhoods, bike-friendly roads, and transit systems; planning for resilient energy

systems, reducing reliance on fossil fuels, and encouraging green building elements and renewable energy generation and storage.

REGIONAL HOUSING STRATEGY

The June 30, 2017 "Regional Housing Market Analysis and 10-Year Forecast for Housing Supply and Demand" study for Barnstable County prepared by Crane Associates, Inc. and Economic & Policy Resources highlighted the need for a comprehensive regional housing strategy that supports development of affordable and varied housing options

for Cape residents of all income levels and ages. Based on the results of this study, this RPP promotes housing production where it is most efficient in terms of land use and infrastructure and will not negatively impact the region's crucial natural and cultural resources.

REGIONAL CAPITAL PLANNING

This RPP includes a framework for development of a Regional Capital Plan intended to characterize, quantify, plan, and advocate for regional infrastructure and facilities and the planning, forecasting, decision making and financial tools to support the region's communities.

STREAMLINED LOCAL COMPREHENSIVE PLANNING

Towns are encouraged to incorporate the regional goals and objectives of the RPP into local planning efforts. To encourage more towns to adopt or update their local comprehensive plans, the Commission will develop a template for what should be included in local comprehensive plans and technical guidance on the components of a local capital

improvement plan. In addition, the Commission will continue developing web-based tools to help towns identify and better understand their community assets and opportunities. Commission staff will also assist towns in developing their local comprehensive plans to preserve or promote such assets and capitalize on their communities' opportunities.

REGIONAL PERFORMANCE MEASURES

This RPP identifies regional performance measures intended to track the implementation and effects of the regional goals and objectives established by and through the RPP. The changes in these regional performance measures over time will help identify areas where progress has been made as well as areas in need of more work, which should be the focus for future Commission efforts.

The Cape Cod Region

Cape Cod is an iconic peninsula of 15 towns extending 60 miles into the Atlantic Ocean, and currently home to approximately 214,000 year-round residents. With over 500 miles of coastline and beaches, almost 1,000 freshwater ponds covering more than 17 square miles of the region, and more than 100,000 acres of habitat, wetlands, and protected open

space, the natural beauty, environmental resources, and historic character of the region have made Cape Cod a globally-recognized visitor destination. Though each Cape town is unique, the Cape is often described as four sub-regions of towns with more similar characteristics—Upper, Mid, Lower, and Outer—further detailed in the following pages.

Two unique areas on Cape Cod are Joint Base Cape Cod and the Cape Cod National Seashore (both shown in hatching on the map to the left). Joint Base Cape Cod, a military installation of approximately 22,000 acres in the Upper Cape region, currently hosts five military commands and the Massachusetts National Cemetery. Approximately 15,000 acres of Joint Base Cape Cod have been designated as the Upper Cape Water Supply Reserve. This area is permanently protected open space for future water supply and wildlife habitat while allowing compatible military training. The Cape Cod National Seashore, comprised of about 27,000 acres in the Outer and Lower Cape, was established in 1961 and contains outstanding and critical natural, scenic, and recreational resources. Limited development exists within the Cape Cod National Seashore.

CAPE COD REGIONAL POLICY PLAN SECTION 1 THE CAPE COD REGION

The Upper Cape sub-region consists of four towns: Bourne, Sandwich, Falmouth, and Mashpee. This sub-region of the Cape is closest to Boston and the rest of Massachusetts and contains the Cape Cod Canal and the Bourne and Sagamore bridges. Although seasonality permeates the entire Cape region, the Upper Cape communities tend to be less seasonal than the Lower and Outer Cape towns, with Bourne and Sandwich having the lowest proportions of seasonal housing in the region and the youngest populations. The Upper Cape tends to have higher median incomes than the other Cape towns, lower median home prices than the Lower and Outer Cape towns, and economies that are somewhat less focused

on tourism. Woods Hole Oceanographic Institute, Marine Biological Laboratory, the National Oceanic and Atmospheric Administration, and associated spin-off businesses in Falmouth and Bourne make the Upper Cape a key area for oceanographic research and related industries. Also unique to this sub-region is Joint Base Cape Cod (shown in dark blue in the above graphic), which is approximately 22,000 acres in size, and includes land in parts of Bourne, Mashpee, and Sandwich and abuts the Town of Falmouth. The Upper Cape is relatively densely developed outside of Joint Base Cape Cod but does contain significant natural resources and open spaces.

SECTION 1 THE CAPE COD REGION CAPE COD REGIONAL POLICY PLAN

Though the Mid Cape subregion is comprised of only three towns-Barnstable, Yarmouth, and Dennis—it is home to almost 40% of the region's year-round population. In addition to the historic Cape villages and downtowns, the Mid Cape also has large areas of suburban development, particularly in Barnstable and along Route 28 in Yarmouth. Barnstable has one-third of all commercial building square footage in the region and Route 132 in Barnstable is the Cape's

regional retail and commercial center, with a regional mall as well as several other larger, national retailers. The Town of Barnstable is the largest town on the Cape and has the largest population. Education and Health Services make up nearly one-third of all employment in Barnstable, but moving west to east within the Mid Cape, the towns generally become more seasonal and tourism-oriented both in terms of housing units and employment opportunities.

CAPE COD REGIONAL POLICY PLAN SECTION 1 THE CAPE COD REGION

The Lower Cape, consisting of the towns of Brewster, Harwich, Orleans, and Chatham, is where the typical development patterns of the region start to transition from denser suburban to somewhat more rural and include large tracts of open space such as Nickerson State Park and Punkhorn Parklands. Year-round populations and the number of housing units in this region are a fraction of the Upper and Mid Cape towns, though still higher than

the Outer Cape towns. The Lower Cape communities tend to have older populations and higher median incomes than the Mid Cape towns. This subregion is much more seasonal than the Upper and Mid Cape, though not as seasonal as the Outer Cape. Though this region tends to have higher median incomes than the Mid Cape, housing is also more expensive, with Chatham and Orleans having the highest median house prices in the region.

SECTION 1 THE CAPE COD REGION CAPE COD REGIONAL POLICY PLAN

The four towns of Eastham, Wellfleet, Truro, and Provincetown make up the Outer Cape. These towns have significantly smaller yearround populations than the rest of the region—Truro's year-round population is only 1,738 people. These towns are much more rural in nature than the rest of the region. Part of what makes this sub-region unique and contributes to the rural and natural development patterns that typify these towns is the presence of the Cape Cod National Seashore (shown in dark green in the above graphic). This National Park contains more than 27.000

acres in the Outer Cape (as well as portions of Orleans and Chatham) and provides critical and stunning wildlife habitat, open space, and recreational opportunities, with limited development within its borders. In all towns within this region, housing units outnumber the yearround population because more than half of the housing stock is seasonal. This subregion of the Cape experiences the most significant seasonal changes in population, housing, and the economy, and is very heavily focused on the tourism industry.

CAPE COD REGIONAL POLICY PLAN

SECTION 1 THE CAPE COD REGION

CAPE COD COMMISSION RESPONSIBILITIES

Unprecedented growth on Cape Cod in the 1980s prompted the Massachusetts General Court (the state legislature) to pass the Cape Cod Commission Act (Act) in 1989. The Act was signed into law by the Governor in January 1990 and ratified by a majority of Barnstable County voters in March 1990.

The Act established the Cape Cod Commission (Commission) as Barnstable County's regional planning and regulatory agency. Through the Act, the Commission is responsible for balancing the protection of the region's resources with appropriate development and economic progress. Simply put, the mission of the Cape Cod Commission is to keep a special place special.

Section 1 of the Act identifies the values, purposes, and goals of the Commission as follows:

Section 1(a): The region commonly known as Cape Cod, comprised of Barnstable County, including all geographic areas to the jurisdictional limit of the commonwealth, possesses unique natural, coastal, scientific, historical, cultural, architectural, archaeological, recreational, and other values; there is a regional, state and national interest in protecting, preserving and enhancing these values; and these values are being threatened and may be irreparably damaged by uncoordinated or inappropriate uses of the region's land and other resources.

Section 1(c) of the Act identifies the purposes of the Cape Cod Commission, which are to further:

- The conservation and preservation of natural undeveloped areas, wildlife, flora and habitats for endangered species;
- The preservation of coastal resources including aquaculture;
- The protection of groundwater, surface water and ocean water quality, as well as the other natural resources of Cape Cod;

■ Balanced economic growth;

- Provision of adequate capital facilities, including transportation, water supply, and solid, sanitary and hazardous waste disposal facilities;
- The coordination of the provision of adequate capital facilities with the achievement of other goals;
- The development of an adequate supply of fair affordable housing;

And the preservation of historical, cultural, archaeological, architectural, and recreational values.

Section 1(d) of the Act states that the Commission shall:

- Anticipate, guide and coordinate the rate and location of development with the capital facilities necessary to support such development;
- Review developments
 which will have impacts
 beyond their local
 community and determine

the comparative benefits and detriments of those projects and their consistency with the regional policy plan and local comprehensive plans and goals;

- Identify and protect areas whose characteristics make them particularly vulnerable to adverse effects of development;
- Preserve the social diversity
 of Cape Cod by promoting
 fair affordable housing
 for low-income and
 moderate-income persons;

- Promote the expansion of employment opportunities; and,
- Implement a balanced and sustainable economic development strategy for Cape Cod capable of absorbing the effects of seasonal fluctuations in economic activity.

To carry out these broad purposes and goals, promote the public health, safety and general welfare, to maintain and enhance sound local and regional economies, and to ensure balanced economic development, Section 1(b) of the Act gives the Commission the authority to:

- Review and regulate
 Developments of
 Regional Impact (i.e.,
 developments that will
 have impacts beyond
 their local community)
- Recommend for designation specific areas of Cape Cod as Districts of Critical Planning Concern
- Prepare and oversee the implementation of a regional land-use policy plan for all of Cape Cod.

Under the Act, the Regional Policy Plan is required to:

- Propose a growth policy for the region, contained in Section 3 of the plan
- Identify Barnstable
 County's critical resources
 and management needs,
 covered in Sections 4 and 5
- Develop regional goals for the next five years and beyond, covered in Section 6 of this plan
- Develop a policy for coordinating regional and local planning efforts, contained in Section 7 of this plan.

Evolution of the Regional Policy Plan

PREVIOUS VERSIONS OF THE RPP

The region's first Regional Policy Plan was adopted on September 6, 1991, just over one year after adoption of the Cape Cod Commission Act. The 1991 RPP adopted a Vision Statement that supported "protect[ing] the best of Cape Cod and repair[ing] the mistakes of the past." The plan contained goals, policies, and implementation strategies. These strategies consisted of Commission actions and recommended town actions and regulatory standards for

13 different issue areas. The 1991 RPP also included mapped and identified resources of regional importance, such as the Water Resources Classification Maps, and a strategy for coordination with other state, federal, and local partners. The 1991 plan proposed to map areas for designation as village, regional, and industrial growth centers for adoption through local comprehensive plans (LCPs). The 1991 RPP also mapped regulated and planning areas and adopted goals, minimum performance standards, and other development review policies for each issue area.

The 1996 and 2002 RPP updates followed a similar format to the 1991 plan. The 1996 update placed considerable emphasis on growth management tools and recommended analyzing the carrying capacity of Cape Cod's resources. Designation of growth centers remained in the plan for adoption in LCPs. The Outer Cape and Monomoy Capacity Studies, which analyzed transportation, water supply, and wastewater capacity in these two regions were a direct result of the 1996 plan and were prepared within the next few years. The 2002 plan also placed more

emphasis on designation of
Districts of Critical Planning
Concern (DCPCs) for growth
management purposes
and to protect regional
resources, resulting in several
DCPC designations for
those purposes.

In Spring 2006, the Barnstable County Commissioners appointed the 21st Century Task Force (Task Force) to evaluate the Commission's operations and make recommendations to improve the agency's effectiveness and relationships with towns. The 21st Century Task Force report included

over 35 recommendations for improvements to the Commission's regulations. This effort resulted in a restructuring of the RPP to develop a more focused map-based approach to planning and regulation and included the adoption of the first Regional Land Use Vision Map (RLUVM). The RLUVM included five general categories of land use: Economic Centers, Industrial/ Service Trade Areas, Villages, Resource Protection Areas, and Other. The Task Force also recommended the Commission place more emphasis on planning and

technical services for towns and to make the regulatory process more clear, predictable, flexible, and effective.

As a direct result of the Task Force recommendations, the Commission engaged in a collaborative process with Cape towns to adopt local Land Use Vision Maps (LUVMs) to incorporate into the RLUVM. As a result of this process, eight of 15 towns adopted LUVMs that were incorporated into the 2009 RPP.

The 2009 RPP divided the plan into separate planning and regulatory sections and grouped issue areas into three categories: Growth Management Systems, Natural Systems, and Human/Built Systems. The 2009 RPP also expanded the practice of applying different standards in different geographic locations to issue areas in addition to water resources and reduced Development of Regional Impact (DRI) mitigation requirements in mapped Economic Centers for transportation, open space, and affordable housing

CAPE COD REGIONAL POLICY PLAN

SECTION 2 EVOLUTION OF THE REGIONAL POLICY PLAN

KEY ISSUES

The RPP update process included stakeholder meetings, surveys, and feedback on a draft plan. During this process, stakeholders helped to identify six key issues addressed in this plan.

CLIMATE CHANGE

PROTECT NATURAL RESOURCES

ADDRESS HOUSING NEEDS

PRESERVE CHARACTER

PROMOTE REGIONAL CAPITAL PLANNING

EASE LOCAL COMPREHENSIVE PLANNING

to create incentives for development to locate in these areas.

RPP UPDATE PROCESS

In December 2014, the
Commission held three subregional hearings to begin the
RPP update process. These
initial meetings provided
an overview of the Cape's
development history and
its effects on the region's
economy, culture, and
environment. In addition,
these meetings served as a

forum for gathering public feedback on themes or lessons learned for incorporation and consideration in the updated RPP. These meetings were also used to recruit stakeholders to participate in several additional meetings to inform the RPP update, discussed in the following text.

EARLY STAKEHOLDER INPUT

Recruited stakeholders, who represented a wide range of backgrounds, constituencies, and their interests and

concerns, were grouped by sub-regional geographic area. Representatives were selfselected volunteers residing or working within the applicable sub-regional areas who were generally able to represent broader constituent and interest groups, for example, citizens, planners, municipal officials, environmental advocates, builders, attorneys, engineers, historic preservationists, or housing authorities. The Commission convened each of the three stakeholder working groups

(Upper Cape, Mid Cape, and Lower/Outer Cape) six times over the course of nine months, from March through November 2015.

Each stakeholder group
helped to inform a suite of
online decision-support tools
that employed the principles
of geodesign, a framework
that fosters collaborative
decision-making and greater
understanding of the impacts
of those decisions on
natural systems. Geodesign
emphasizes the significance of
geographic context in design

and utilizes science- and value-based information to help designers, planners, and stakeholders make betterinformed decisions. Two of the tools describe the past and present of development on Cape Cod and how it came to look the way it does. Another allows users to plan and analyze future development scenarios, and how those might impact the region. The Commission developed and tested the tools containing Cape Codspecific data and information with the stakeholder groups.
With the tools, users could
visualize and evaluate the
effects of different land use
decisions on the built and
natural environment, including
past, present, and potential
future development scenarios.
The information and results
from these tools allowed
the stakeholders to provide
better-informed feedback for
the direction of the policies of
the updated RPP.

The feedback from these meetings highlighted some central issues and needs for the region that are key components of this plan: improving affordable housing, coordinated regional capital planning, and better guidance on developing local comprehensive plans. In addition to the in-person stakeholder process, the Commission also conducted two surveys to gain a better understanding of the priorities of the people of Cape Cod to ensure the updated RPP reflects and meets their interests.

SECTION 2 EVOLUTION OF THE REGIONAL POLICY PLAN

CAPE COD REGIONAL POLICY PLAN

Past

CHRONOLOGIES VIEWER

Link: ccc-plans.org/chronology

The Chronologies Viewer is a web-based reference tool that displays historical data, aerial mapping, and other data sets in a geo-referenced viewer. It includes annual historic data on parcels, population, tax rate, and assessed value dating as far back as 1625 through present day. Annual data on built parcels, as well as historic aerial imagery dating back to 1930, allow the user to track emerging development patterns Cape-wide. The Chronologies Viewer highlights the impacts of past land use and development decisions and illustrates changes over time, which can help inform future planning, design, and regulation on Cape Cod.

Present

COMMUNITY CHARACTERISTICS APPLICATION

Link: ccc-plans.org/characteristics

The Community Characteristics application was developed using the most important metrics that define a community on Cape Cod based on stakeholder feedback. This application contains data about Cape Cod's people and places, revealing regional patterns that tell a story about where and how Cape Codders live, work, and play. Although the RPP serves the region as a whole, differences between towns must be recognized. The Community Characteristics application allows for this classification and comparison.

Future

ENVISION TOMORROW

Link: ccc-plans.org/et

Envision Tomorrow allows users to make assumptions about land use and development in the future and explore the effects of different scenarios on economic, environmental, and social factors. The tool shows the impacts of decisions on the major challenges facing Cape Cod, including lack of affordable housing, loss of habitat, lack of year-round jobs, auto-dependency, and flood risk, to inform policies and decisions that will be most effective in facing these challenges.

CAPE COD REGIONAL POLICY PLAN SECTION 2 EVOLUTION OF THE REGIONAL POLICY PLAN

WHAT DRAWS HOMEOWNERS TO CAPE COD?

Since the initial homeowner survey, conducted in 1995, the factors of environmental quality, access to the coast, and reasonable taxes have consistently been among the most frequently cited reasons for the initial decision to live or maintain a home on the Cape.

HOMEOWNER SURVEY

In the fall of 2014, the University of Massachusetts Donahue Institute (UMDI) surveyed 1,637 Cape Cod homeowners for the Cape Cod Commission to better understand homeowners' perspectives and opinions related to planning and development issues on Cape Cod. The survey had a 24% response rate, with 389 respondents completing the survey.

Of all survey respondents, slightly more than half were year-round residents. Most respondents had owned their homes for more than

15 years. Environmental quality (clean air and water), access to the coast, reasonable taxes, recreational opportunities, and the affordability of housing (at the time of purchase) were the top reasons respondents wanted to own a home on Cape Cod. These factors have consistently been among the most frequently cited reasons for the initial decision to live or maintain a home on the Cape.

Respondents consistently identified the region's current problems as traffic congestion, coastal erosion, the availability of jobs and

economic opportunities, and the pollution of ponds and coastal waters. Not only did respondents view these issues as key current problems facing the region, but as potential serious problems in the near future. Also of key concern for homeowners, and particularly year-round residents, was the costs associated with wastewater treatment and solid waste disposal.

In terms of future development, respondents generally expressed limited support for new residential or commercial development on Cape Cod, with the exception of a technology firm, light

industrial use development, a cultural facility, and small neighborhood businesses. The majority of respondents supported making development easier in already-developed commercial areas and more difficult in less developed areas. The identification of Community and Industrial Activity Centers and Natural Areas in this RPP serves these interests by encouraging the development of small neighborhood businesses and civic amenities in Community Activity Centers, as well as appropriate light industrial uses in Industrial Activity Centers, while minimizing sprawl.

Respondent support for the development of infrastructure was greatest for bike paths and sewer treatment and collection systems, while there was mixed support for possible ways to alleviate traffic congestion such as widening of Route 6 east of exit 9 or widening of statenumbered roads. Most respondents noted they enjoy the water views and opportunities for swimming afforded by living on the Cape and have not changed their engagement in water related activities even though about half of respondents had

noticed a change in coastal or pond water quality over the past decade.

This was the third iteration of this survey, with previous surveys conducted in 1995 and 2005. Having asked the same questions over time provides insight into trends among regional homeowners and their interests. Comparing responses to the 2014 survey to the 1995 and 2005 surveys shows that environmental quality, access to the coast, and reasonable taxes have always been, and remain, important factors in people deciding to own a home on the Cape. Reasonable taxes

Pollution of Ponds and

PROBLEMS CAPE COD IS FACING?

WHAT DO HOMEOWNERS THINK ARE THE TOP

were more important to

Coastal Waters

WHAT KINDS OF NEW DEVELOPMENTS DO HOMEOWNERS WANT?

respondents in 2014 than in 1995, while consideration of the region as a good place to raise a family was less important in 2014 than in 1995. Additionally, between 2005 and 2014, the importance of job or economic opportunities decreased and the importance of the nearness of friends and relatives increased from 1995 to 2014. Traffic congestion, pollution of ponds or coastal waters, availability of job or economic opportunities, and coastal erosion were identified as key problems facing the region both in 2005 and 2014, with concern about coastal erosion increasing significantly SECTION 2 EVOLUTION OF THE REGIONAL POLICY PLAN CAPE COD REGIONAL POLICY PLAN

Cape Cod second-home owner survey respondents are active supporters of local arts, cultural, and other nonprofit organizations. Nearly all report purchasing groceries, hardware/building supplies and garden supplies locally for their second home.

from 2005 to 2014. This information underscores the unwavering importance of the region's natural environment.

SECOND-HOME **OWNER SURVEY**

More than one-third of all seasonal homes in Massachusetts are located in Barnstable County, and more than one-third of all homes in Barnstable County are seasonal. Collectively, the owners of these seasonal or secondary homes (second-home owners) have a significant stake in the regional policies established in this RPP. To help the

Commission gain a better understanding of secondhome owners' interests, the Commission worked with the University of Massachusetts Donahue Institute (UMDI) to survey second-home owners on Cape Cod in the spring of 2017. UMDI distributed nearly 6,500 surveys; 1,293 survey recipients responded (20% response rate). This survey follows up and expands on a 2008 survey by including questions related to the potential impacts of environmental factors on second-home ownership.

Cape Cod second-home owners average 65 years in age, up from 61 years in age from the 2008 survey, are highly educated (80% have a bachelor's degree or higher), and 70% earn \$100,000 or more annually. The survey found that nearly 90% of respondents own only one home other than their primary residence and nearly 85% of respondents either purchased their second home or purchased the land and built a home. The vast majority-85%-of second homes are single family

homes with 2 to 4 bedrooms. with an average lot size of 3/4 of an acre.

of second-home

owner survey

respondents

Not surprisingly, second homes are used most in the summer and least in the winter, and primarily by the homeowners, with less than 30% of respondents ever renting their homes out over the past five years. Based on survey responses, this trend is unlikely to change in the near future, as nearly 80% of respondents said they anticipated the rental usage of their house to remain the same or is not applicable (i.e., it is not rented out).

Nearly 20% of respondents anticipate converting their second home into their primary residence within the next 20 years, with 40% of those respondents stating they plan to work part- or full-time on the Cape after relocating here.

Despite the location of 70% of respondents' second homes being within onemile of the coast, less than 10% of respondents reported experiencing coastal erosion or flooding in the past five years, only 7% expect impacts in the next five years, and only 26% expect impacts from erosion or flooding in

the next 25 years. Of those expecting future coastal erosion or flooding impacts, only 20% plan to protect their home through construction of hard structures. Lastly, only 12% of respondents report deterioration of water quality in the ponds or coastal areas near their home during their ownership tenure.

The data show that Cape Cod second-home owners actively support the Cape Cod community and economy. About 75% of respondents support arts, cultural, and other nonprofit organizations on the Cape through donations and purchases

and about 70% reported attending or visiting museums, concerts, galleries, or theater productions. In addition to contributions to community organizations, second-home owners contribute to the local economy as nearly all report purchasing groceries, hardware/building supplies, and garden supplies on Cape Cod for their second home. However, few respondents use on-Cape financial or medical services and specialists because they are unnecessary while on the Cape and have established providers off-Cape.

CAPE COD REGIONAL POLICY PLAN

SECTION 2 EVOLUTION OF THE REGIONAL POLICY PLAN

PUBLIC COMMENT AND FEEDBACK ON DRAFT

A draft of this plan was released for a 60-day public comment period on September 21, 2018. During this comment period, three public hearings were held—one in Sandwich, one in Truro,

and one in Yarmouth—and
Commission staff attended
nine Select Board and/or
Planning Board meetings.
Additionally, Commission staff
met with staff from five towns,
presented the draft plan to
the Assembly of Delegates and
the Cape Cod Selectmen and
Councilors Association, and
met with the Town Planners
from across the Cape, in

addition to 12 meetings with other stakeholders. During this time, stakeholders were encouraged to provide feedback on the draft plan at these meetings, as well as provide written comments. The public comment period ended on November 19, 2018 and more than 135 comments were received.

Comments generally fell into the following broad categories: balancing the economy and environment; the new framework for regulatory review; Placetypes; climate change mitigation; regional, sub-regional, and local characterizations; and plan process and general support. Additionally, there were issuespecific comments on capital

facilities and infrastructure, community design, economy, energy, housing, ocean resources, solid waste, local comprehensive plans and capital plans, transportation, and water resources.

The input from the initial stakeholder process and surveys helped identify key areas of concern such as affordable housing, preserving

the area's natural resources, and protecting the regional character, and helped to shape a regional vision for the future of Cape Cod that balances protecting the critical regional resources with allowing for efficient growth in appropriate areas. Building upon the initial stakeholder process and surveys from 2014-2017, the feedback from the public

comment process on the draft plan highlighted that climate change mitigation is one of the key issues facing the region, while also underscoring the need for affordable housing and the importance of balancing and linking the region's environment and economy to support vibrant communities into the future.

A Regional Vision for Cape Cod SECTION 3 A REGIONAL VISION FOR CAPE COD

CAPE COD REGIONAL POLICY PLAN

The region's intrinsic wealth stems from its natural beauty, historic community character, and healthy coastal and freshwater environments. The features that make Cape Cod attractive are also the cause of the forces that threaten to overwhelm the environment and erode its character. The challenge Cape Cod continues to face is balancing the protection of the environment with supporting the residents, workers, and visitors with

the necessary services and infrastructure to thrive over the long term. Where that balancing point lies may be a point of discussion, but the choices made must consider the threat of losing those unique Cape assets that cannot be replaced.

The vision for the future of Cape Cod is a region of vibrant, sustainable, and healthy communities, and protected natural and cultural

resources. To advance this regional vision, the 2018 RPP includes a description of eight Placetypes, including identified Community Activity Centers, Industrial Activity Centers, and Natural Areas. The Commission will focus efforts to support vibrant downtowns and village centers by helping to plan for housing and economic opportunities to meet regional needs in the Community Activity Centers, and the Industrial Activity

Centers will be targeted areas for future growth in existing and emerging industries.

The Natural Areas will be the focus of the Commission's efforts to protect vulnerable resources and improve the Cape's resilience to severe storms and the effects of climate change.

Growth Policy for Barnstable County

Growth should be focused in centers of activity and areas supported by adequate infrastructure and guided away from areas that must be protected for ecological, historical or other reasons. Development should be responsive to context allowing for the restoration, preservation and protection of the Cape's unique resources while promoting economic and community resilience.

Cape Cod Systems

The Cape Cod Commission Act requires that the Regional Policy Plan identify Barnstable County's critical resources and management needs. Cape Cod is comprised of a suite of interrelated and interdependent systems: natural, built, and community. Natural systems are an integral part of life on Cape Cod, providing drinking water and supporting the habitats and landscapes that draw people to the region, guiding

development patterns, and driving the region's economy. Built systems—the humanmade physical elements of the region—allow for people to live, visit, and work on the Cape. Community systems are the social activities and qualities of the region, including the economy and cost of living, which depend on the health of both the natural and built systems. While maintaining a healthy balance among these systems has been an ongoing effort, climate change is anticipated to impact how each system functions, creating new challenges. The Growth Policy recognizes the importance and interdependence of these systems and the need to balance the impacts and functions of each to sustain the Cape over the long term. These natural, built, and community systems are described in this section.

NATURAL SYSTEMS

BUILT SYSTEMS

COMMUNITY SYSTEMS

NATURAL SYSTEMS

The region's natural systems are vital to the economy and way of life. The natural environment of Cape Cod includes the water and ecosystems upon which life depends and is prioritized by this plan for protection and restoration. The natural systems of the Cape center around water, waterdependent resources, and habitat. High quality natural systems are part of Cape Cod's attraction for residents and visitors, but they are also all susceptible to contamination

from various land uses and activities and are increasingly vulnerable to changes in climate. In the future, it is anticipated the natural functions of these systems will be affected by increases in storm severity, intensity, and rainfall, as well as changes in temperature and periods of drought. Protection and restoration is a critical need.

GROUNDWATER

Cape Cod groundwater
is derived solely from
precipitation and is stored in
sandy glacial deposits that
comprise Cape Cod's aquifer
as the groundwater flows

to the coast. The aquifer deposits are generally very permeable, making them ideal for development of highyielding water supplies, but simultaneously vulnerable to contamination from land uses in their watersheds. Cape Cod's aquifer is bound by the water table, by a transition zone between fresh and salt water, and by bedrock beneath portions of the upper Cape. The water table fluctuates in response to the seasonal loss of recharge due to evaporation and transpiration. About 10% of the total recharge to the aquifer is pumped for water supply. The amount

of groundwater available for drinking water is limited to maintain the hydraulic balance of the aquifer's saltwater boundaries and sustain flow to the region's fresh waters and estuaries.

The Cape Cod Aquifer is comprised of six lenses of groundwater. The four Outer Cape lenses are buoyed above saline groundwater due to differences in fresh and salt water density.

Each lens is separated by interlens discharge areas (e.g., estuaries). A lens is further divided into watersheds expressed by the water table

Source: Cape Cod Commission, USGS

(rather than topography)
that are defined by their
respective receiving surface
waters or wells. These
watershed areas contribute
to municipal water wells,
estuaries and embayments,
fresh-water ponds and lakes,
or open ocean.

The Cape Cod Aquifer is one of the most productive groundwater systems in New England and provides 100% of the Cape's drinking water. The aquifer is designated a Sole Source Aquifer under the Safe Drinking Water Act by the Environmental Protection Agency (EPA), a designation

that requires Federally-funded projects to assess project impacts to the aquifer.

MARINE WATER

Ocean waters support rich marine life and complex ecosystems. Marine systems include open ocean, smaller segments such as Nantucket and Vineyard Sound, and estuaries and coastal embayments. Marine waters support important ecosystems such as primary shellfish habitat and spawning grounds for fish, as well as primary recreational areas for Cape Cod residents and visitors.

Coastal Waters

Nearly 80% of the region's land area drains to coastal embayments and estuaries. The remaining land discharges directly to open water such as the Cape Cod Canal, Nantucket Sound, Cape Cod Bay, and the Atlantic Ocean. Of the Cape's 101 watersheds, 53 watersheds drain to nutrient-sensitive coastal embayment and estuaries. Development contributes nitrogen to groundwater, either through wastewater or other sources such as fertilizer and stormwater runoff, and ultimately the nitrogen reaches the embayments.

The increased availability
of this nutrient results in
excess algae and degradation
of water quality, posing a
primary threat to coastal
habitat. The ability of most
Cape Cod coastal embayments
and estuaries to assimilate
nitrogen has already been
exceeded. These impacts are
further discussed in the next
section of the plan.

Offshore Marine Waters

The oceanographic conditions around Cape Cod are varied.

Vast quantities of sediments deposited during the late

Pleistocene glaciation form the underpinnings of Cape

Cod and the seafloor beneath its surrounding waters. Currents from the Gulf of Maine and the Gulf Stream affect sea temperature, with resulting biological differences around the region. The unique ocean environments support a host of species, including many rare or threatened fish, birds, reptiles, and marine mammals. Much of the marine waters around Cape Cod support the last population of the federally endangered North Atlantic Right whale. Cape Cod ocean waters continue to support fisheries

that support recreational and commercial shellfishing and finfishing.

In addition to development on dry land, land under the ocean, seawater, and the space above the ocean surface are increasingly in demand for new marine uses. Changes to the Massachusetts Ocean Sanctuary Act in 2008 made renewable energy development, sand mining, and cable and pipeline installations possible in offshore locations, and other changes in state policies have created incentives for these development activities.

The federal government's creation of offshore wind leasing areas in federal waters south of Martha's Vineyard and Nantucket means interconnection cables may cross through state and regional jurisdictional areas, making landfall on Cape Cod. To date, Massachusetts has permitted very limited ocean-based sand mining; with erosion rates and sea level rise increasing, demand for offshore sediments to nourish area beaches may also increase. While these water-dependent uses are important economically and for the region's energy and

climate future, it is important to balance these interests with preservation of the critical marine ecosystems in these areas.

FRESHWATER PONDS AND LAKES

The Cape's nearly 1,000 freshwater ponds are essentially "Windows on the Aquifer," manifestations of the water table where topographically low-lying areas extend below water level. Covering nearly 11,000 acres, Cape Cod's ponds are highly variable in size, ranging from less than an acre to 735 acres. The 21 largest ponds

make up nearly half of the total Cape-wide pond acreage. Approximately 40% of the ponds are less than an acre, while 166 are designated as great ponds of 10 acres or more. As part of the regional aquifer system, ponds are directly linked to drinking water and coastal estuaries.

particularly sensitive to additions of phosphorous, which is associated with development and land uses close to a pond (such as wastewater, fertilizer, and stormwater sources). Since 2001, many of Cape

Cod's freshwater ponds and lakes have been monitored through the Ponds and Lakes Stewardship Program. In 2003, the Cape Cod Pond and Lake Atlas was published, documenting the water quality for over 190 ponds. Many are impacted by development and land uses in their watersheds and accumulated organic matter at their bottom. Buffering pond shorelines from development is an effective strategy for protecting freshwater ponds and lakes by taking advantage of the soil's ability to adsorb and store phosphorus,

thereby storing and delaying this nutrient from entering the pond.

WETLANDS

The Cape's groundwater and stormwater runoff discharge to surface water in ponds, lakes, rivers and streams, coastal waters, and wetlands. These wetland resources support much of the plant and wildlife that makes the Cape such an environmentally rich and interesting place. In addition, wetlands play a vital role in regulating the environment by absorbing and filtering storm and flood waters, providing

natural removal of nitrogen, recharging the aquifer, storing carbon in wetland peat and vegetation, and providing vital habitat.

Critical to protecting the nearly 30,000 acres of wetlands and their natural functions are healthy, naturally vegetated buffers.
Buffers provide important habitat as well as assist in the management of pollutants, trapping or arresting nutrients and sediment before they can flow into wetlands and clog or impair them. Increasingly, wetland buffers preserved from development will help to

store increased stormwater runoff as the climate changes and will allow wetlands to migrate as changes in groundwater height and increased precipitation events occur. Development pressures on wetlands are discussed in the next section of the plan.

OPEN SPACE

The open space of the Cape is critical to the health of the region's natural systems, economy, and population.

Open space provides habitat for the region's diverse species and protection of the region's drinking water supply. Wooded open space provides

a carbon sink for mitigating the impacts of climate change, both through the storage of carbon that would otherwise be lost to the atmosphere through development, and through the carbon-absorbing capacity of trees. Open space contributes significantly to the natural and rural character of the region and supports key industries. The beaches, farms, woodlands, and marshes of the Cape provide recreational outdoor activities that attract visitors and residents to the region and provide the necessary land and resources for the Cape's agricultural activities.

An analysis conducted using 2012 assessor's data showed that protected open space comprises approximately 40% of the Cape's more than 230,000 assessed acres. The protected land includes federal, state, and local holdings, which vary widely in their amounts by town. In total, Cape towns hold more than 30,000 acres of protected open space. In addition to government entities, private land trusts have been critical in protecting open space as well.

Nearly a third of the region's protected open space lies within the Cape Cod National Seashore. This area, established through the visionary efforts of citizens and the federal government in 1961, contains more than 27,000 acres of outstanding natural, scenic, and recreational resources across six Lower and Outer Cape towns. Three federally designated national wildlife refuges (NWR) also grace the Cape: Monomoy NWR in Chatham, and the Mashpee NWR and Great Thicket NWR both of which identify

undeveloped lands in
Falmouth and Mashpee for
acquisition.

At approximately 22,000 acres, Joint Base Cape Cod (JBCC), formerly known as the Massachusetts Military Reservation (MMR), is one of the largest contiguous properties in state or federal ownership on Cape Cod. Camp Edwards is comprised of approximately 15,000 acres in the northern portion of the base. The cantonment area, which is substantially more developed with structures, roads and other infrastructure, is comprised of approximately

7,000 acres in the southern portion of the base. JBCC includes parts of the towns of Bourne, Mashpee, and Sandwich, and abuts the town of Falmouth. The northern 15,000 acres of Joint Base Cape Cod are protected by the Upper Cape Water Supply Reserve, established through a Memorandum of Agreement (MOA) and an Executive Order in 2001 and codification of the MOA into law in 2002 for the purposes of water supply protection, wildlife habitat, and open space consistent with compatible military training activities.

Park in Brewster, Hawksnest
State Park in Harwich, Crane
Wildlife Management Area in
Falmouth, the Hyannis Ponds
in Barnstable, and numerous
other smaller parks and
preserves.

HABITAT

The entire Cape Cod
peninsula is located within the
southeastern Massachusetts
pine barrens eco-region. Pine
barrens are a globally rare
habitat type comprised of a
unique assemblage of plants
and animals that thrive on
the nutrient-poor soils and
variable climate found on
Cape Cod. Within the pine
barrens eco-region, there
are many and varied habitat

types, including pitch pineoak woodlands, transitional
hardwood-pine forests,
streams and rivers, ponds and
lakes, vernal pools, shrub and
forested swamps, estuaries,
salt marshes, dunes, beaches,
grasslands, and others. This
rich mosaic of habitat types
supports 132 state listed rare
plant and animal species,
including Important Bird
Areas, as well as hundreds
more species that rely on Cape

Cod habitats year-round or seasonally when migrating through or for breeding. When healthy naturally functioning habitats are protected from the impacts of development, humans benefit from the many ecosystem services that these habitats provide. Ecosystem services are functions that are intrinsic to a natural community, and which benefit humans through the services they provide,

such as recreational access, filtering of nutrients or air quality, provision of food and other needed resources, and mitigating the threats from natural hazards.

For many years habitat loss due to development has been the primary threat to the region's habitats. While habitat fragmentation and loss through clearing or removal continues to be a significant threat, new threats such as climate change, invasive species, and the reduction of natural disturbances increasingly challenge the continued long-term health of native natural communities. Natural disturbances, such as wildfire or severe storms, are necessary to maintain the diversity of vegetation groupings that define the region's woodlands, heathlands, and coastal plain

pond shores. Fire suppression, invasive species, and changing climate threaten the integrity of these habitats. The region's challenge is to find ways to protect remaining undeveloped lands, manage habitat to support diverse vegetation, and target invasive species incursions. Threats to habitat are discussed further in the next section of this plan.

BUILT SYSTEMS

The built environment human-made infrastructure and resources-accommodates the people who choose to live and visit Cape Cod. Protecting and enhancing the built environment, including providing infrastructure that supports the region and vibrant activity centers, is vital to supporting the Cape's population. In many cases, infrastructure, such as wastewater treatment, is needed to improve and maintain the integrity of the

region's natural environment.
Built systems rely heavily
on fossil fuels. Changes in
climate require the region
evaluate past development
and consider changes needed
to mitigate and accommodate
the potential effects. The
built environment must
complement the regional
character and be protective of
the natural systems.

DEVELOPMENT

Through most of the 1800s, development on Cape Cod concentrated around small village centers with little or no residential or commercial development in outlying areas. During the mid-1800s, much of the development occurred close to harbors and waterways in support of the regional maritime industries, defining the historic character and development pattern for villages still seen today. From the late 1800s through the early 1900s the Cape underwent a slow transformation from a subsistence farming and fishing way of life to a

seaside resort destination attracting summer visitors and outside wealth.

The advent of rail travel, automobiles, and the adoption of the interstate highway system added to the accessibility and the popularity of Cape Cod. For the first half of the 1900s, the inland areas of Cape Cod remained largely undeveloped with most residential development concentrated near the coastline. Starting in the 1950s, the population

began to rise more rapidly, and continued to grow even faster from the 1970s through the early 2000s, as Cape Cod became a desired location for retirees and second-home, "seasonal use" buyers. With this population increase, development increased and began to occupy much of the interior of the Cape as well.

Regulations, as well as market demand, influence the region's past and present development patterns. Aspects of zoning regulation adopted

on Cape Cod-such as large required minimum lot sizes and yard setbacks, and the rigid separation of residential and commercial uses—have had the effect of prohibiting the type of compact, mixeduse, and frequently desirable development representative of villages developed prior to the adoption of zoning. Though such zoning regulation resulted in less overall density of development on Cape Cod, the intensity of development has increased throughout the region, consuming more

land on a per unit basis and replacing what was once undeveloped forest land.

Though deforestation has happened on the Cape for centuries, early deforestation was for agrarian purposes that often left the land vacant with potential for forest regrowth.

More recently, permanent structural development, such as houses and roads, is replacing forest land.

CAPE COD REGIONAL POLICY PLAN

Starting in the 1950s, development rapidly increased across the region, peaking in the 1980s. Beginning in the 1970s and continuing through today, the intensity of development increased, with larger homes and more impervious surface per lot. Year developed data is based on current assessing records from the 15 individual towns. In some cases, the year developed date may not reflect the first year a parcel went into development, but subsequent significant redevelopment.

2010-2018 3,100

DRINKING WATER SUPPLIES

Clean and reliable drinking water is essential to support the population of Cape Cod. Throughout the Cape, this need is met through a combination of public and private water supply infrastructure. Approximately 85% of Cape Cod is serviced with public water. The remaining 15% rely on private or privately owned small volume wells that serve the public in portions of East Sandwich, West Barnstable, Eastham, Wellfleet, and Truro. There are 18 separate water districts, municipal divisions

and departments across Cape Cod (including the recently formed Eastham public water supply). All together there are 160 gravel pack municipal water supply wells (some capable of producing over 3 million gallons per day), one surface reservoir, and hundreds of private wells. The wells receive their water from recharge to distinct land areas referred to as wellhead protection areas and Zone IIs through the DEP Drinking Water Program. The wellhead protection areas have been adopted through local zoning and the Regional Policy Plan as groundwater protection

overlays. The total land area of the Zone IIs on Cape Cod is 106 square miles.

Since 2000, public drinking water suppliers have pumped, on average, about 10.7 billion gallons of groundwater per year from Cape Cod's Sole Source Aquifer. Over the last decade, pumping has been fairly consistent, showing only slight variations. Temporal variations are more apparent at the local scale.

The quality of the Cape's drinking water is generally good. A maximum contaminant limit of 10 parts per million

nitrogen is established for drinking water by the EPA and the Commonwealth of Massachusetts to protect public health. A 5 parts per million nitrogen loading goal was established as part of the 1978 Cape Cod Area Wide Water Quality Management Plan to ensure water supply wells on Cape Cod would not exceed the 10 parts per million public health standard. Cape Cod towns and the Massachusetts Department of Environmental Protection have adopted the regional goal of 5 parts per million as a planning and regulatory limit. While only a handful of

public water supply wells have tested near 5 parts per million, a slight upward trend in nitrogen concentrations in the region's public water supplies is the result of development in wellhead protection areas.

Nitrogen can serve as an indicator of other contaminants, such as petroleum compounds, pharmaceuticals and personal care products and other contaminants of emerging concern (CECs). Emerging contaminants are not commonly monitored or regulated in the environment but may have negative impacts

on ecological or human health. The EPA required testing for a select subset of emerging contaminants in public water supplies with over 10,000 connections. Several Cape Cod water suppliers participate voluntarily. Contaminants of emerging concern are being found in public and private water supplies under both the EPA's one-time Unregulated **Contaminant Monitoring** Rule program (UCMR) and sampling being conducted by the Silent Spring Institute. Septic systems are included as likely CEC sources. The UCMR Program reported occurrences of CECs in water

samples collected from at least one withdrawal point for all 12 participating water suppliers. Subsequent sampling has detected 1-4 dioxane and perfluoroalkyl substances above Massachusetts Drinking Water Guideline concentrations in four wellfields in the Hyannis and Mashpee supply districts.

The Silent Spring Institute tested for CECs in 20 private wells, 20 untreated public wells, and two public distribution systems. Of the 20 public wells, 15 wells and two distribution systems had detectable levels of at least

one measured CEC. Of the 20 private wells, 17 had detectable levels of at least one measured CEC. Other private wells impacted by CECs have been identified by other investigators. For example, perfluoroalkyl-substances have been detected in private wells down-gradient of the Joint Base Cape Cod firetraining facility and areas used to discharge treated groundwater; and 1,4-dioxane was detected in private wells down-gradient of Eastham's capped landfill - an impetus for Eastham's new public water supply system. Joint Base Cape Cod is presently

seeking funding to address contamination of private wells and a water supply in Mashpee attributed to use of firefighting foam at the base.

Where drinking water quality has been impaired by land uses, restoration is nearly impossible. Many public water supply wells are now treated for removal of natural elements, such as iron and manganese, or to neutralize bacteria in the special case of Long Pond in Falmouth, the Cape's only surface-water supply. Several municipal drinking water supply wells on Cape Cod

are treated for a range of contaminants, including CECs and petroleum-based and other legacy contaminants from industrial uses. Several historic wells subject to contamination have been abandoned and replaced. Water supplies require continued vigilance and protection from upgradient development pressure to avoid the need for expensive treatment or replacement from a finite source.

The ongoing generation of hazardous wastes, and the transport, storage, and use of hazardous materials continues to be a concern. In addition, there continues to be a need to identify and protect suitable undeveloped land with potential for future water supply development.

WASTEWATER MANAGEMENT

Ensuring that development does not significantly degrade water quality on the Cape requires effective wastewater management.
The Massachusetts Estuaries Project (MEP) identified wastewater as the primary source of nitrogen to the Cape's coastal embayments, with septic systems

contributing 94% of wastewater nitrogen with the remainder from municipal or smaller private wastewater treatment facilities (WWTF). Ensuring the continued health and enjoyment of the Cape's water resources will require wastewater management to reduce nitrogen and restore water quality.

Several factors have led to the current distribution of wastewater infrastructure, where Title 5 septic systems are the predominant type of wastewater management on Cape Cod, and only 3% of the parcels or 15% of total Cod are handled with shared or centralized public or private wastewater treatment facilities. The generally permeable soils throughout the Cape region make onsite Title 5 systems highly effective for wastewater disposal, and relatively low density of development can make the cost of collecting and conveying wastewater to centralized treatment facilities expensive. Consequently, less than 4% of the state's population lives on Cape Cod yet the region is home to 20% of the standard Title 5 systems. Standard

wastewater flows on Cape

Title 5 systems, even when functioning correctly, are not designed to remove nitrogen and provide minimal nitrogen removal. The wide distribution of septic systems discharging high nitrogen wastewater accounts for nearly 80% of the controllable nitrogen load on Cape Cod.

Higher levels of nitrogen removal can be achieved at different infrastructure scales, including nitrogen removing septic systems on individual properties, cluster or satellite systems at the neighborhood or village level, and centralized wastewater

treatment facilities. There are more than 123,000 standard Title 5 septic systems and more than 1,700 denitrifying septic systems installed on Cape Cod. Barnstable, Chatham, Falmouth, and Provincetown are the four Cape Cod communities with municipally owned and operated centralized wastewater treatment facilities; across Cape Cod there are 60 smaller, typically privately owned, wastewater treatment facilities. Portions of the Buzzards Bay section of Bourne utilize the Wareham Wastewater Treatment Facility.

On Cape Cod, wastewater at WWTFs is generally treated to 10 parts per million nitrogen. Over the last three decades effluent discharges are encouraged to be located outside of Zone II wellhead protection areas. Discharges in Zone II areas can only be considered if significant treatment levels are attained and remediation of existing drinking water problems are included.

Centralized wastewater collection, treatment, and disposal systems can achieve high levels of nitrogen removal but require significant capital investment. Their high cost, and the ability or willingness of property owners and government to bear such cost, has impeded planning and implementation of more widespread centralized wastewater management systems on Cape Cod. With anywhere from 30-60% of the housing stock being seasonal across the Cape, wastewater treatment facilities must be designed and sized for a peak flow which occurs only four weeks a yearthe last two weeks of July and the first two weeks of August (just like water supply infrastructure). The need to

accommodate that shortterm peak flow drives up the costs of a system that could otherwise handle typical wastewater flows throughout the rest of the year. However, accommodating peak flow allows flexibility to handle flow, especially for the initial phases of a planned collection system. Finally, towns need to stimulate their tax base to fund wastewater system improvements, which is usually in the form of taxing new growth. At the same time, new growth often depends on whether there is sufficient shared or centralized wastewater infrastructure

Source: Cape Cod Commission

in place to handle such new growth. Though these systems are expensive, there are also direct and indirect costs (often unrecognized) to property owners and the region at large associated with owning and maintaining or replacing individual Title 5 septic systems. Continued growth and development on Cape Cod will need to rely on more shared or centralized wastewater treatment. Therefore, new development should be used as a financial and political catalyst for wastewater planning efforts.

STORMWATER MANAGEMENT

Although much of the emphasis on controlling nitrogen loading to coastal embayments focuses on wastewater, stormwater runoff also contributes approximately 8% of the total controllable nitrogen load and impacts other water resources, including freshwater ponds. The same highly permeable soils that allow precipitation to recharge the Cape Cod aquifer also readily allow infiltration of runoff from roofs, parking lots, and roadways. These stormwater flows also recharge the aquifer but can

contain toxic substances (such as petroleum products, pesticides, and heavy metals) as well as nutrients (nitrogen and phosphorus from fertilizers and animal waste). Management of stormwater should include managing its quantity (storing or infiltrating runoff to prevent ponding or flooding) and its quality (treating the runoff to remove suspended solids, nutrients, and toxic substances). Throughout Cape Cod varying levels of stormwater infrastructure exist; from gray infrastructure (systems of curbs, gutters, and conveyances to divert

the flow of stormwater from buildings, streets, and parking areas) to green infrastructure or Low Impact Development (LID) structures that have been designed to mimic natural hydrologic processes and improve the quality of stormwater runoff while still allowing for aquifer recharge. Most towns on Cape Cod are now required under the EPA's MS4 program to inventory existing infrastructure and identify problems such as illicit discharges.

Recent history indicates that storm frequency and intensity are increasing. The quantity and quality of stormwater and the need for appropriate management strategies is anticipated to require more attention in the future.

TRANSPORTATION NETWORK

Numerous subsystems make up Cape Cod's transportation network including vehicular roadways, railways, public transportation, air travel, marine transportation, and pedestrian and bicyclist accommodations and networks. These systems are responsible for safely and effectively moving the people of the region and

the goods they rely on.
Additionally, these systems
must serve not only the yearround population but must
also effectively handle the
movements of the more than
doubled seasonal population,
which requires building and
maintaining a transportation
system that functions under
the strain of the peak season,
without negatively impacting
the character that defines this
unique place.

Central to Cape Cod's transportation system is its over 3,800 miles of roadways, 80% of which are smaller, local roads. Route 6, Route 28, and Route 6A—the three major arteries of the Capeonly account for 6% of the region's roadways. The remaining 14% of roadways are medium-sized local or state roads. The roadways meet in 129 signalized intersections and 25 roundabouts and rotaries. Cape Cod has over 100 vehicular crossings over roadways, railways, and water bodies including the Bourne and Sagamore Bridges over the Cape Cod Canal. The Bourne and Sagamore Bridges are critical to the long-term viability of the region.

Source: MassDOT; Cape Cod Commission; Cape Cod Regional Transit Authority

Rail service and infrastructure ultimately extended the entire length of Cape Cod, from Bourne to Provincetown, and points between, beginning in the mid-1800s through the first half of the 1900s. Today the extent and usage of rail is reduced to a single rail line, the Cape Cod Line, which travels through Bourne before branching off to termini in Hyannis, Yarmouth, and Joint Base Cape Cod. Together, these branches and the single line form a network of rail infrastructure for the freight services,

scenic rail excursions, and CapeFlyer seasonal, weekend passenger service.

While personal vehicle travel is the predominant transportation mode on Cape Cod, the Cape also hosts a number of transit-dependent residents who do not have access to a private automobile. Data from the U.S. Census Bureau, 2011-2015 American Community Survey (ACS) 5-year Estimates indicates that 5.7% of Cape residents do not have access to a vehicle. These residents are dependent on public transport, bicycle or other modes of transportation. The Cape Cod Regional Transit Authority (CCRTA) provides public transit throughout the region and connects Cape Cod to neighboring communities and regions. The CCRTA offers several types of services, including fixed route service, flexible route service, and demand-response or paratransit service. Six of the CCRTA's fixed routes run yearround, primarily through the Upper, Mid, and Lower Cape regions. Demand-response service includes Dial-A-Ride Transportation (DART) and ADA Paratransit Service. The Greater Attleboro-Taunton Regional Transit Authority

(GATRA) also operates one line, the Onset-Wareham Link (OWL), with stops in Bourne. There are also several private bus companies connecting Cape Cod to other regional destinations such as Boston and New York City. Six airfields and airports also link Cape Cod residents and visitors to Boston, New York, and the islands of Martha's Vineyard and Nantucket.

Water also plays a large role in the transportation network of Cape Cod.
Harbors and channels provide connections between marine transportation and land

transportation routes and nine ferry routes connect Cape Cod to Martha's Vineyard, Nantucket, Boston, and Plymouth.

Destinations and pathways
for bicyclists and pedestrians
to use on Cape Cod are
abundant, however, bicyclists
and pedestrians face
numerous challenges on Cape
Cod roadways. Cape Cod has
over 90 miles of multi-use
paths, including the Cape Cod
Rail Trail and Extension, Cape
Cod Canal Bike Paths, Shining
Sea Bike Path and Extension,
and numerous paths in the
Cape Cod National Seashore

and Nickerson State Park. These pathways provide safe, separate accommodations for bicyclists and pedestrians, but frequently do not connect to one another, inhibiting bicyclists' and pedestrians' abilities to use them to travel throughout the region. A more comprehensive regional path network is envisioned with a spine that runs from one end of Cape Cod to the other with connections into villages and destinations in each of the communities. In addition to the separate paths, several bicycle routes exist, allowing bicyclists a wide network of travel across the region,

but on roadways rather than dedicated paths separated from motor vehicle traffic.

Sidewalks provide not only pedestrian accommodations but encourage travelers to walk instead of drive, thereby supporting village centers and local businesses. However, significant gaps in the regional sidewalk network exist in many communities across Cape Cod. Furthermore, autooriented site design, including large parking lots without appropriate pedestrian accommodation, can make travel as a pedestrian challenging.

The mixture of narrow roadways, high seasonal and locational traffic volumes, and inconsistent pedestrian and bicyclist accommodations create a great deal of conflict between vehicles and people walking and biking.

UTILITIES

The Cape's population and economic and social activities depend on reliable and affordable access to electricity, natural gas, and telecommunications.

Eversource is the local distribution company and is responsible for distributing electricity to the region.

The Cape Light Compact Joint Powers Entity (JPE) is the largest single energy supplier for residents and businesses on the Cape; however, electric customers may choose their competitive supplier. Electricity is primarily distributed through overhead wires.

Electricity supply to the Cape comes from many fuel sources. Massachusetts generates 68% of its electricity from natural gas, 10% from nuclear sources, and 0.3% from petroleum. The state generates 1,867 MW of electricity by solar photovoltaics, surpassing its goal of generating 1,600 MW by 2020. There are additional sources from other renewables and hydroelectric power.

Microgrids, which have the ability to disconnect from the traditional electric

grid in order to operate autonomously, are not prevalent on Cape Cod; however, the Department of Defense operates a wind-powered microgrid at Joint Base Cape Cod and in 2019 another is anticipated at Dennis Yarmouth Regional High School.

Approximately 100,000 customers get natural gas from National Grid—the sole natural gas service provider on Cape Cod. Natural gas lines

are not provided everywhere on Cape Cod, and there are no lines north of Eastham.

Education, government,
healthcare, and other service
and innovation sectors of the
economy rely on effective and
reliable access to broadband
and telecommunications.
Residential internet service is
available virtually throughout
the region and is primarily
served by a single provider
(Comcast). Depending on
where a business is located,
it may have a choice of

internet service providers with OpenCape's continual expansion of its fiber optic internet services infrastructure. As more people choose to work from their homes, and more services such as doctor visits are conducted virtually, fast and reliable internet service will become even more important. Most of the region is served by multiple wireless communications providers, but there remain some places without service.

Maintaining and enhancing the wireless communications infrastructure is increasingly critical to the region's need for emergency and non-emergency communications while also ensuring protection of the region's scenic and historic character.

COMMUNITY SYSTEMS

The Cape's community systems, which include the culture, people, and economic activity of the area, are critical for fostering and maintaining vibrant communities and social networks that serve and support the people who live, work, and play in the region. The community systems are intricately tied to the environment. Impacts to natural systems, such as those related to climate change or water quality, will present challenges with respect to

protecting cultural heritage, community character, and the economy.

CULTURAL HERITAGE

The Cape's rich cultural heritage and historic character stem from its Native American beginnings to its maritime industrial growth and success as a resort destination. The Cape Cod Commission Act recognizes the importance of the region's significant historical, cultural, archaeological, and architectural resources and charges the Commission with protecting them.

Many of the region's historic buildings have been protected with special designations. Thousands of the Cape's buildings are listed on the National Register of Historic Places, either individually or in one of the region's 45 National Register Historic Districts, and many more are within the Cape's 16 Local Historic Districts. These resources, including Cape Cod's rural areas and historic villages, are tangible connections to the region's agricultural heritage, maritime history, artist colonies, and unique past and play a key role in attracting

and retaining residents and visitors to Cape Cod. Challenges faced in preserving these resources are discussed in the next section of this plan.

Responses to the 2014
homeowner survey
highlighted the importance
of these resources, with over
70% of respondents rating the
historic character of the Cape
as important or very important
in their decision to live or
own a home on the Cape.
The survey also highlighted
support for preserving this
historical character: 81% of
respondents would support
requiring new buildings to

conform with the traditional design and architectural character of Cape Cod and 56% would support preservation or restoration of historic buildings through dedicated sources of public funding such as local tax receipts.

PEOPLE

The environmental and social challenges this region faces are largely due to rapid population growth beginning in earnest in the 1960s. By the 2000 Decennial Census, Cape Cod had grown over 400%, adding just over

175,000 year-round residents in five decades. Housing on the Cape went from being 60% seasonal in 1960 to 65% year-round in 2010; in total units the region went from just under 55,000 homes in 1960 to over 160,00 homes in 2010. During this same period, most towns invested in road improvements, schools, and public water to accommodate growth but fewer invested in wastewater treatment systems. Growth, due to postwar zoning, took a suburban form, consuming much of the Cape's land and undermining the historic character that

made the region such an appealing place to live and visit.

Cape Cod's population includes the Mashpee Wampanoag Tribe, which has inhabited present day Massachusetts for more than 12,000 years. According to their website, the Mashpee Wampanoag were reacknowledged as a federally recognized tribe in 2007. In 2015, the federal government declared 150 acres of land in Mashpee as the Tribe's initial reservation, on which the Tribe can exercise its tribal sovereignty rights.

Year-round Residents

Cape Cod's year-round population peaked at just over 228,000 residents around 2003 according to US Census Bureau population estimates. The 2010 Decennial Census showed a decline of about 10,000 to 12,000 people; estimates since that time have the population holding steady at about 214,000 yearround residents. Population projections vary greatly, but a recent study of housing supply and demand suggest that the resident population could grow by about 6,000 people by 2025; other population

projections indicate a continued loss of population in the region.

Data from the US Census Bureau tells us that within the population of yearround residents, the Cape hosts various populations that should be considered in the Commission's planning efforts. Minority populations identified for their origin or language include about 8% of regional residents who speak a language other than English at home; most of those (70%) speak English as well. About 2% of the region's population (over 5 years of age) speak

little or no English. The largest number of non-English speakers are Portuguese speaking (and this represents 1% of the county population). Eight percent (8%) of county residents self-identified as "Minority" in the 2010 US Census.

Migration has played a key role in the region's population changes. The region became popular for both retirees and younger families as it became more accessible and, at the time, affordable. Migration to the Cape continues today, but at a much slower rate than the 1980s and 1990s.

Meanwhile, the natural growth rate, births over deaths, is currently negative and the resident population continues to age. While the median age of the population is getting older across the US, as a retirement community Cape Cod's median age (51 in 2016; ACS) is significantly higher than average. In 1990 most of the population (58%) was under the age of 45, but now about 60% of the population is over the age of 45, compared with about 40% nationwide. These age and growth trends are important elements for understanding the region's past and how best to plan

Source: 2012-2016 American Community Survey

for its future, but resident population is only one piece of the puzzle.

Second-home Owners

Second-home owners have long been major players in the region's economy and housing market; this fact is unlikely to change in the future. The number of second homes on Cape Cod has grown more slowly than year-round homes, growing 73% since 1960 versus the nearly 400% increase in year-round homes during that same time. Going forward, however, the recent housing study projected that demand through 2025

for seasonal housing units will be more than double that of demand for primary residences. Seasonal units are non-uniformly distributed over the land; many are clustered along the coast and the greatest number are in the Mid-Cape, but in the Outer-Cape they represent over 50% of all the housing units.

According to a 2017 second-home owners survey carried out by the University of Massachusetts Donahue Institute (UMDI), the average Cape Cod second-home owner is 65 years-old, four years older than

from the 2008 survey. The vast majority—80%—have a bachelor's degree and 70% have an annual income of \$100,000 or more. Most of the respondents live year-round in Massachusetts, with 1/3 of respondents calling the metropolitan Boston area home. Approximately a quarter of second-homes are rented either year-round or short-term.

July and August are when second homes are used the most, with much lower use in the winter months. However, nearly 20% of respondents anticipate moving to the Cape

full-time in the next 20 years. Of those respondents, 40% state they plan to work part-or full-time on the Cape after relocating here.

Visitors

Visitors are an important segment of the Cape community, coming mostly in the summer but also on weekends throughout the fall and spring. Data on rooms tax receipts, an indicator of visitor activity, suggest that visitors today are as numerous as at their peak in 1999. Like the seasonal population, visitors bring new resources to the region that serve to

Source: 2017 Housing Market Analysis, Crane Associates and EPR

150,000 JOBS ON THE CAPE

than 100 employees

increase economic output and generate jobs and wages. They support local arts and culture and value the region's beaches and natural areas. Visitor patterns will change with national and international economic and political changes; typically, the Cape has weathered recessions well and been successful at attracting both international visitors and those from the larger northeast region to maintain steady levels across the decades.

ECONOMY

The Cape Cod Commission Act calls for the Commission to implement a balanced and sustainable economic development strategy for Cape Cod capable of absorbing the effects of seasonal fluctuations in economic activity. The economy of Cape Cod reflects the region's population mix of full-time and seasonal residents, and visitors. It also reflects the age of the population, which tends to be older than communities off-Cape. As such, the dominant industries in the region are Accommodation & Food Service, Retail Trade,

and Health Care; in terms of employment 17% of jobs are in Accommodations & Food Service, 16% are in retail trade, and 18% are in Health Care (US Bureau of Labor Statistics, 2017). Just under a quarter of jobs in the region are in emerging industry sectors including creative economy sectors, financial and information sectors, and professional services and technical service sectors. The region's marine assets, location, and the presence of Woods Hole Oceanographic Institute, the Marine Biological Laboratory, and the National Oceanic and

Atmospheric Administration provide unique employment opportunities in the marine sciences and technology sector. Additionally, Cape Cod Community College, Bridgewater State College, and the Massachusetts Maritime Academy, and good K-12 schools, provide educational opportunities that contribute to the region's economy.

While employment growth has been steady, the average wages paid by Cape employers, when adjusted for inflation, have been largely stagnant and consistently below state and national averages since 1990.

Source: US Census Bureau (2015)

As a retirement community, over 43% of resident incomes come from non-wage income sources such as real estate, social security, and investments.

The Cape Cod economy is aptly characterized as a "Blue Economy" driven by the extensive shoreline and direct access to open water. Historically, the Cape's blue economy was based on extracting resources from the sea, such as fish, whales, salt, or shellfish. Some of these activities continue today along with new ventures around enjoying and understanding

the region's blue resources. Tourism is a blue sector focused on bringing people here to directly enjoy the Cape's blue resources. Marine sciences is a blue sector focused on understanding marine resources, making new discoveries to help improve human wellbeing and protecting marine ecosystems. New economic sectors will continue to emerge that are directly dependent on marine resources and Cape Cod is in a strong position to embrace these new ventures and thus progress towards a balanced and sustainable economy. Seeing the region's economy

through this Blue Economy lens reinforces understanding of the interdependencies of the economy and environment.

The marine environment, unique historic character of the region, and vibrant arts and culture scene attract both residents and visitors to the region. Most of the businesses on the Cape are small and independent, with fewer than 10 employees. Only 1% of the employers on Cape Cod have workforces greater than 100 employees. Because the tourism industry is most active in the summer months

and many tourism-related businesses close during the winter, unemployment fluctuates drastically throughout the year, especially in Lower and Outer Cape towns. In the summer and fall, businesses typically import labor to fill seasonal jobs.

Cape Cod second-home owners actively support the Cape Cod community and economy. Nearly 75% of the 2017 Second Homeowner Survey respondents support arts, cultural, and other nonprofit organizations on the Cape through donations and purchases and about

70% reported attending or visiting museums, concerts, galleries, or theater productions. In addition to contributions to community organizations, secondhome owners contribute to the local economy as nearly all respondents report purchasing groceries, hardware/building supplies, and garden supplies on Cape Cod for their second home. However, few respondents expressed the need to have used local financial or medical services and specialists while on the Cape and have already-established providers off-Cape.

HOUSING

Cape Cod's housing supply lacks diversity. Today, detached, single-family homes comprise more than 80% of the region's housing stock, compared with just over 50% for Massachusetts as a whole and 62% nationwide (ACS 2016 data). This means there are few housing options for those people who either cannot afford or do not want a detached single-family home. Given the high land value in the region, detached singlefamily homes are typically the most expensive housing option, driving up the cost of living in the region.

High demand for housing, by both year-round residents and second-home owners, and low average wages on Cape Cod results in a housing market that is unaffordable for many year-round residents. In all but one of the 15 towns on the Cape, the median home value exceeds the affordable home price for residents at or below 100% of the Median Household Income (MHI), and for seven of the eight Lower and Outer Cape towns, the median home value far exceeds the affordable home price for a household earning even 120% MHI.

The June 2017 Regional Housing Market Analysis finds that about 22,000 Barnstable County households that earn \$90,000 or less experience housing-cost stress, meaning they spend more than the recommended 30% of their income on housing costs. The lack of diverse housing options on the Cape, such as townhouses and apartments, also contributes significantly to the high cost of housing. Younger families starting out lack housing options that are often a building block to long-term financial stability. Similarly, older individuals looking to downsize struggle

to find suitable options and often stay in single-family homes that are large, further constraining the housing market.

Chapter 40B, also known as the Comprehensive Permit Law in Massachusetts, was enacted in 1969 to help address the shortage of

of the national housing stock is detached single-family homes

affordable housing statewide by reducing unnecessary barriers created by local approval processes, local zoning, and other restrictions. The goal of Chapter 40B is to encourage the production of affordable housing in all cities and towns throughout the Commonwealth. The standard is for communities

to provide a minimum of 10% of their housing inventory as affordable. Despite the enactment of Chapter 40B, on average, only 5.3% of the Cape's housing inventory is affordable.

Regional housing challenges are discussed further in the next section of this plan.

Source: 2012-2016 American Community Survey

As illustrated by the region's systems in the previous section, Cape Cod is a special place, but one that also faces significant challenges. Though in many cases the natural, built, and community systems augment one another and contribute to what makes the Cape a special place, they can also have conflicting needs or functions. At the regional scale, ensuring that the environment is protected will generally have positive effects on sustaining the economy since these areas of interest are so closely linked.

MORE DEVELOPMENT, FEWER NATURAL AREAS

Between 2001 and 2011, the
Cape lost more than 2,300
acres of forest cover, with
70% of the loss replaced
by development (buildings,
driveways, parking lots, etc.).
Losses vary in size from full
lot clearing for individual
development projects and
subdivisions to more selective
discrete tree removal on
individual lots. Approximately

84% of the clearing is associated with residential use and development.

The broad loss of forest cover, and related forest fragmentation, negatively affects regional character as well as the natural functions tree cover provides such as wildlife habitat, carbon sequestration, nutrient uptake, and stormwater and flood water management and filtration. At the same time, with the increase in impervious surfaces occasioned by forest loss, stormwater run-off has

increased and with it the need for natural systems to recharge such run-off.

Land use policy and regulation in the region, though intended to better protect the natural environment by reducing the overall density of development, has resulted in larger minimum required building lot sizes, and other lot requirements under prevailing policies and regulations have contributed to more impervious cover that is more spread out across the region.

DEVELOPMENT IMPACTS ON WATER QUALITY

Surface water quality in Cape Cod ponds has been significantly impacted by surrounding development. A comparison of 1948 and 2001 dissolved oxygen concentrations suggest that many of these pond ecosystems are not only impacted, but seriously impaired.

The fresh water ponds of Cape Cod provide a significant benefit in removing nitrogen as it moves through the

watershed. Ponds provide natural attenuation of nitrogen in groundwater and are an important consideration in watershed planning, as they act as "nitrogen filters." However, Cape Cod soils lack the geological buffering to neutralize acid rain and allow pollutants to drain rapidly into the aquifer. The anticipated increase in storm frequency and intensity due to climate change has the potential to exacerbate impacts.

The Cape Cod Aquifer is extremely susceptible to contamination from various land uses and activities. The aquifer has been seriously impacted in the past from military activities, gas stations, landfills, and development generally. The quality of Cape Cod's community public drinking water supply is generally very good, but the cumulative impact of development has resulted in a trend toward degradation in areas that contribute to certain wells. The presence of contaminants of emerging concern also present a threat to drinking water.

EXCESS NITROGEN IN COASTAL **WATERS**

Nearly all development on Cape Cod continues to utilize on-site septic systems that release nitrogen to groundwater, which eventually travels to coastal embayments and results in degraded water quality. Cape Cod is home to 53 embayment watersheds with physical characteristics that make them susceptible to nitrogen impacts. Thirtytwo of these watersheds cross town boundaries and 34 have

been found to be impaired and require nitrogen reduction to meet water quality goals.

Nitrogen is impacting coastal water quality. About 80% of the nitrogen that enters Cape Cod's watersheds is from septic systems. Excess nitrogen destroys animal habitat and results in fish kills and diminished shellfisheries. Climate change threatens to increase nitrogen loading to coastal waters and increases in temperature have the potential to increase the risk of algal blooms.

The Cape Cod seasonal economy relies on the water that surrounds the region and degraded water quality negatively impacts important economic drivers including coastal property values. Initial findings from a recent Cape Cod Commission study evaluating home prices in the Three Bays area in the Town of Barnstable indicate a 1% increase in nitrogen is associated with a decrease in single-family home sale prices in the range of 0.407% to 0.807% (average 0.61%), with a 95% confidence level.

Environmental quality (clean air and water) is a primary reason people bought a house on the Cape, according to the 2014 homeowner survey.

There have been significant efforts towards implementing solutions aimed at restoring the health of bays and estuaries since the approval of the Section 208 Area Wide Water Quality Management Plan Update in 2015.

Communities are working across town boundaries to solve watershed-based problems and exploring the use of non-traditional technologies in areas where

traditional collection and treatment is too expensive or not feasible.

Barriers to implementation of wastewater infrastructure and potential alternatives for restoring coastal water quality remain. Funding for infrastructure design and construction and comprehensive monitoring to support the use of nontraditional approaches is needed. The challenge moving forward is to create a regional strategy around capital infrastructure needs that can reduce costs for municipalities and ensure that the

remaining burden is shared appropriately. The solution to the financial threat facing the region must be one that supports innovative ideas that communities have embraced through the 208 Plan Update and its process.

CLIMATE CHANGE

Cape Cod faces threats due to climate change. Flooding and erosion will be exacerbated by sea level rise and changing storm frequency and intensity. These threats can cause loss of life, damage buildings and infrastructure, impair coastal

environments, and otherwise impact a community's economic, social, and environmental well-being. The 2018 Intergovernmental Panel on Climate Change Special Report projects continued sea level rise into the next century, with the rate of rise depending on how future greenhouse gas emissions are managed. Bringing emissions under control sooner than later will provide more time to plan for and respond to the Cape's changing shoreline. The report calls on the global community to act collectively to reduce emissions to achieve a net zero CO2 emission rate

as soon as possible in order to allow time for adaptation to the inevitable changes. While the problems posed by climate change appear unstoppable, there are actions the Cape community can take to reduce emissions and participate in the effort to slow the rate of change. Increasing the region's resilience to climatic changes and a rising sea level means thinking into the future and adjusting behaviors that put people and property at risk. Mitigating the causes of climate change and adapting to its effects on Cape Cod involves making

policy decisions with both environmental and economic considerations.

It is likely that the region's vulnerability will increase in the future as sea levels continue to rise, climate change intensifies, and the region experiences an increase in storm activity and severity. Scientists anticipate that climate change will bring stronger storms with more precipitation and the threat of more frequent and extensive flooding to the region. Storms have resulted in power outages, limiting access to necessary services,

and increased storm activity is likely to further impact the region's power resources. In addition, temperatures are anticipated to rise, with related degradation of air quality, strain on local indigenous flora and fauna, increases in foreign pest migration, and more health-related problems, and significantly for Cape Cod, changes in sea surface temperature and the viability of the coastal environments for the region's native wildlife.

Sea level rise poses a major and particular threat to Cape Cod, which has 586 miles of vulnerable, tidal shoreline. Projected sea level rise will increase flooding, both elevating the height of storm and non-storm surges and flood levels, and exacerbating inundation and storm surge by sending floodwaters further inland, resulting in potential inoperable first response facilities, and substantial loss to property, economic prosperity, and habitat. In addition to structural and economic losses, sea level rise also threatens Cape Cod's groundwater with potential higher groundwater levels and, to a lesser effect, saltwater intrusion.

Even today, without the increased risk of climate change and sea level rise, flooding threatens more than 13,000 single-family homes—worth a combined \$9 billion—located within the FEMA special flood hazard areas.

Cape Cod's response to these threats must consider the region's vulnerabilities, priorities and opportunities. The extent of private property development and public assets located within coastal hazard areas poses the greatest challenge to sensitive but meaningful response to climate change. Additionally, in Massachusetts, private ownership of the shoreline to the mean low-water line affects potential responses to coastal impacts of climate change, including what adaptation strategies are feasible and who's responsible for paying for them. The

regulatory environment,
particularly along the
shoreline, complicates
the ability of communities
to appropriately plan for
and implement actions
that benefit the whole
community's interest.

PRESERVING HISTORIC RESOURCES

Even with the many National Register and Local Historic Districts, thousands of historically significant buildings on the Cape are not protected. More than 40% of the region's inventoried historic buildings over 100 years old have no protection from demolition or alteration of their character-defining features. Archaeological sites and historically open landscapes are similarly unprotected. Development pressures in waterfront areas and historic neighborhoods continue to threaten these resources that embody the region's history and character. Demolition of these irreplaceable resources not only destroys the physical elements of the region's cultural heritage, but also negatively impacts community character and the

economy, which are strongly tied to Cape Cod's unique architectural heritage.

Working with Cape towns and other organizations, the Commission seeks to improve and update historic inventories, better integrate cultural resource concerns into development reviews,

of inventoried structures over 100 years old are not protected

In 2015 in all but one town—Bourne—the median home value exceeded the affordable home price for those earning the median household income (MHI) of homeowners. Without changes, this problem is projected to become more acute in the next several years as the median household incomes and related affordable median home prices are only expected to increase minimally, if at all. Source: Crane/EPR 2017

and create new zoning that establishes incentives to reuse historic buildings to help protect the region's distinctive historic character and culture.

EXPENSIVE HOUSING, LIMITED OPTIONS

The Cape Cod housing market does not meet the region's diverse needs. Lower than average wages, higher than average costs, a lack of choice, limited supply, and the ever-present demand for seasonal and retiree housing by baby boomers makes housing for the current and future year-round population a high priority challenge.

To buy a median priced home on Cape Cod requires an income of at least \$75,000 a year. The median price for a home is over \$350,000 with most of the lower 50% of units closely clustered around

the median. Rental housing is even more limited on Cape Cod given that many property owners can make more money renting their property for six weeks in the summer than renting it year-round, or they choose not to rent out their seasonal homes at all. The 2017 Regional Housing Market Analysis predicts that by 2025, close to half of the region's population will experience housing-cost stress, meaning they will spend more than the recommended 30% of their

income on housing costs. Even those businesses with higher-paying jobs still struggle to fill professional positions in banking, engineering, and medicine because housing options on the Cape are significantly more expensive and limited than other regions.

While achieving the Commonwealth's 10% affordable goal remains an important standard for each Cape Cod community and for the region overall, Cape Cod's needs exceed 10%. To address housing needs moving forward, the region must recognize that the Cape Cod housing market is not simply fifteen separate economies but represents a single housing market, with sub-regional distinction. A regional strategy is needed to address the structural deficiencies in the regional market. As the "baby boomer" and general population ages, and as single-parent families and single-person households increase, two-person
households over the age of 65
will dominate the Cape in the
next 20 years. The decline in
the average household size
means that more housing
units will be required to house
the same number of people
as 30 years ago. Without
increasing housing supply and
choices, the Cape's housing
affordability problem is likely
to worsen.

PROVISION OF ADEQUATE INFRASTRUCTURE

The existing infrastructure fundamentally limits the region's ability to grow in a way that balances economic and social wellbeing with the protection of natural and cultural resources. The region's rural and suburban development patterns make providing adequate infrastructure more expensive on a per-unit or per-user

basis as networks are typically more spread out, with fewer users able to utilize and pay for the same systems or materials. These development patterns also require greater development and disturbances of natural resources. However, directed, improved, and expanded transportation, water, wastewater, electric, and broadband infrastructure that mitigates and adapts to climate change will be necessary to support longterm regional economic

stability. These regional
networks must be resilient and
provide last-mile connectivity,
bringing the benefits of
the regional investments
to the people, businesses,
and institutions that are the
backbone of the economy.

Implementing these large-scale infrastructure improvements requires significant community dialog to determine the most effective, efficient solutions that are consistent with

community values including its plan for growth, equity, cost sharing, climate change response, and environmental benefit. The environmental and public health imperatives requiring timely investment in water quality infrastructure across Cape Cod offer this region an opportunity to reset, change the paradigm, and to develop a coordinated plan to direct growth to areas that can support it.

LONG-TERM ECONOMIC STABILITY

Cape Cod's environment is its economy. The region's character and amenities attract a wide range of people who want to visit, live, or work on the Cape, including tourists, retirees, secondhome owners, scientists, entrepreneurs, and artists.

The Commission's regular surveys over the past 15 years consistently find that a clean, natural environment and Cape Cod's historic character are fundamental values.

Economic development for the region depends on a healthy natural environment, continued development of infrastructure to support the population and remediate the impact of 20th century growth patterns, resources to support an appropriately skilled labor pool, and effective and fair regulatory and land use policies.

Unlike business development, economic development focuses on the economic environment rather than on individual businesses.

Economic development for the region should:

protect and build on the region's competitive advantage, the unique natural environment, historic village character, harbors, and cultural heritage;

- use natural assets, capital facilities, infrastructure, and human capital and land use patterns efficiently;
- foster balance and diversity through a mixture of industries, businesses, workers, ownership types, and employment options;
- and expand opportunity and regional wealth by increasing exports,

substituting imports locally, attracting capital, and fostering local ownership.

The long-term challenge is to maintain and improve the quality of the environment and mitigate climate change in the face of ongoing development pressure and environmental and social change to ensure a stable and robust economy into the future, thereby improving

economic resilience. In the 2014 homeowners survey, nearly 83% of respondents listed the availability of jobs or economic opportunities as a serious or moderate problem in their community. The imbalance between wages and cost of living is a threat to the economy and social structure of the region.

Goals and Objectives

SECTION 6 GOALS AND OBJECTIVES

CAPE COD REGIONAL POLICY PLAN

Natural Systems

WATER RESOURCES
OCEAN RESOURCES
WETLAND RESOURCES

WILDLIFE & PLANT HABITAT OPEN SPACE

This RPP adopts goals to guide and plan for the future of the region in a manner consistent with the vision and growth policy of this RPP. The goals and objectives derive from the values and purposes of the Cape Cod Commission Act, preserving and enhancing the region's assets.

Organized around the region's natural, built, and community systems, these goals and objectives form the structure upon which the region's planning work relies, serve as touchstones to guide implementation actions, and set the measures by which the regulatory review process takes place.

Built Systems COMMUNITY DESIGN
COASTAL RESILIENCY
CAPITAL FACILITIES &
INFRASTRUCTURE
TRANSPORTATION

ENERGY
WASTE MANAGEMENT
CLIMATE MITIGATION

Community Systems

CULTURAL HERITAGE
ECONOMY
HOUSING

Natural Systems

To protect and restore the quality and function of the region's natural environment that provides the clean water and healthy ecosystems upon which life depends.

WATER RESOURCES

GOAL | To maintain a sustainable supply of high quality untreated drinking water and protect, preserve, or restore the ecological integrity of Cape Cod's fresh and marine surface water resources.

OBJECTIVES

- 1. Protect and preserve groundwater quality
- 2. Protect, preserve and restore fresh water resources
- 3. Protect, preserve and restore marine water resources
- 4. Manage and treat stormwater to protect and preserve water quality
- 5. Manage groundwater
 withdrawals and discharges
 to maintain hydrologic
 balance and protect surface
 and groundwater resources

OCEAN RESOURCES

GOAL | To protect, preserve, or restore the quality and natural values and functions of ocean resources.

OBJECTIVES

WETLAND RESOURCES

GOAL | To protect, preserve, or restore the quality and natural values and functions of inland and coastal wetlands and their buffers.

OBJECTIVES

- 1.Locate development away from sensitive resource areas and habitats1.Protect wetlands and their buffers from vegetation and grade changes
- 2. Preserve and protect2. Protect wetlands from changes in hydrology species it supports
- 3. Protect wetlands from stormwater discharges use areas and vistas
 - 4. Promote the restoration of degraded wetland resource areas

GOAL | To protect, preserve, or restore wildlife and plant habitat to maintain the region's natural diversity.

WILDLIFE AND PLANT

OBJECTIVES

HABITAT

- 1. Maintain existing plant and wildlife populations and species diversity
- 2. Restore degraded habitats through use of native plant communities
- 3. Protect and preserve rare species habitat, vernal pools, 350-foot buffers to vernal pools
- 4. Manage invasive species
- 5. Promote best management practices to protect wildlife and plant habitat from the adverse impacts of development

OPEN SPACE

GOAL | To conserve, preserve, or enhance a network of open space that contributes to the region's natural and community resources and systems.

OBJECTIVES

- 1. Protect and preserve natural, cultural, and recreational resources
- 2. Maintain or increase the connectivity of open space
- 3. Protect or provide open space appropriate to context

CAPE COD REGIONAL POLICY PLAN

Built Systems

To protect and enhance the built environment and infrastructure necessary to support the region and healthy activity centers.

COMMUNITY DESIGN

GOAL | To protect and enhance the unique character of the region's built and natural environment based on the local context.

OBJECTIVES

- 1. Promote context sensitive building and site design
- 2. Minimize the amount of newly disturbed land and impervious surfaces
- 3. Avoid adverse visual impacts from infrastructure to scenic resources

COASTAL RESILIENCY

GOAL | To prevent or minimize human suffering and loss of life and property or environmental damage resulting from storms, flooding, erosion, and relative sea level rise, including but not limited to that associated with climate change.

OBJECTIVES

- 1. Minimize development in the floodplain
- 2.Plan for sea level rise, erosion, and floods
- 3. Reduce vulnerability of built environment to coastal hazards

CAPITAL FACILITIES & INFRASTRUCTURE

GOAL | To guide the development of capital facilities and infrastructure necessary to meet the region's needs while protecting regional resources.

OBJECTIVES

- 1.Ensure capital facilities and infrastructure promote long-term sustainability and resiliency
- 2. Coordinate the siting of capital facilities and infrastructure to enhance the efficient provision of services and facilities that respond to the needs of the region

OBJECTIVES

system.

1.Improve safety and eliminate hazards for all users of Cape Cod's transportation system

TRANSPORTATION

GOAL | To provide and

promote a safe, reliable, and

multi-modal transportation

- 2. Provide and promote a balanced and efficient transportation system that includes healthy transportation options and appropriate connections for all users
- 3. Provide an efficient and reliable transportation system that will serve the current and future needs of the region and its people

ENERGY

GOAL | To provide an adequate, reliable, and diverse supply of energy to serve the communities and economies of Cape Cod.

OBJECTIVES

- Support renewable energy development that is context-sensitive
- 2.Increase resiliency of energy generation and delivery
- consumption through planning and design (including energy efficiency and conservation measures)

3. Minimize energy

WASTE MANAGEMENT

GOAL | To promote a sustainable solid waste management system for the region that protects public health, safety, and the environment and supports the economy.

OBJECTIVES

- 1.Reduce waste and waste disposal by promoting waste diversion and other Zero Waste initiatives
- 2.Support an integrated solid waste management system

CLIMATE MITIGATION

GOAL | To support, advance and contribute as a region to the Commonwealth's interim and long-term greenhouse gas reduction goals and initiatives, including a state-wide net zero carbon target by 2050.

OBJECTIVES

- Promote low or no carbon transportation alternatives and technologies
- 2. Promote low or no carbon technologies for building energy use, including appliances, lighting, and heating, ventilation and cooling (HVAC) systems
- 3. Promote carbon sequestration and other emissions removal practices and technologies as appropriate to context
- 4. Promote low or no carbon energy generation technologies as appropriate to context

Community Systems

To protect and enhance the linkages between society, the natural environment, and history vital to the way of life on Cape Cod by supporting development of amenities and life opportunities necessary to support vibrant and diverse communities.

CULTURAL HERITAGE

GOAL | To protect and preserve the significant cultural, historic, and archaeological values and resources of Cape Cod.

OBJECTIVES

- 1. Protect and preserve forms, layouts, scale, massing, and key character defining features of historic resources, including traditional development patterns of villages and neighborhoods
- 2. Protect and preserve archaeological resources and assets from alteration or relocation
- 3. Preserve and enhance public access and rights to and along the shore
- 4. Protect and preserve traditional agricultural and maritime development and uses

ECONOMY

GOAL | To promote a sustainable regional economy comprised of a broad range of businesses providing employment opportunities to a diverse workforce.

OBJECTIVES

- Protect and build on the Cape's competitive advantages
- 2.Use resources and infrastructure efficiently
- 3. Foster a balanced and diverse mix of business and industry
- 4. Encourage industries that provide living wage jobs to a diverse workforce
- 5. Expand economic activity and regional wealth through exports, value added, import substitution, and local ownership

HOUSING

GOAL | To promote the production of an adequate supply of ownership and rental housing that is safe, healthy, and attainable for people with different income levels and diverse needs.

OBJECTIVES

- 1.Promote an increase in housing diversity and choice
- 2.Promote an increase in year-round housing supply
- 3. Protect and improve existing housing stock
- 4.Increase housing affordability

Coordinated Regional and Local Planning

Coordinated regional planning is at the core of the Cape Cod Commission's mission. The Commission's regional planning activities address resources and needs that transcend municipal or individual site boundaries. To achieve regional planning goals, the Commission and its staff identify special areas and resources that are particularly sensitive to development pressures and provide technical assistance on a wide range of topics to Cape communities. Additionally, the Commission provides resources to prepare and implement local

plans in coordination with neighboring and oftentimes overlapping jurisdictions. While the Regional Policy Plan is comprehensive in its vision and growth policy for the region and serves as an overarching policy framework for the Commission's planning efforts, there are certain resources or issues facing the region, such as water quality, transportation, economic development, and climate resilience, that require more focused planning efforts beyond that provided through the Regional Policy Plan. These more specialized regional plans and programs

work in conjunction with the RPP to accomplish local and regional goals.

TARGETED REGIONAL AND LOCAL PLANNING EFFORTS

Since the 2009 RPP update, Commission staff has been actively engaged with Cape communities on a wide range of issue-specific regional planning topics, including the Cape Cod Section 208 Area Wide Water Quality Management Plan, the Comprehensive Economic Development Strategy, the Regional Economic Strategy Executive Team program, the Regional Transportation Plan, the Cape Cod Ocean Management Plan, and coastal resilience planning. Following are brief descriptions of these planning activities and links to more information.

CAPE COD SECTION 208 AREA WIDE WATER QUALITY MANAGEMENT PLAN

The Cape Cod Section 208
Area Wide Water Quality
Management Plan (208
Plan Update), certified and
approved by the Governor

of the Commonwealth of Massachusetts and the US **Environmental Protection** Agency (US EPA) in 2015, provides a path forward to define watershed-based solutions for the restoration of the waters that define Cape Cod. Watersheds, however, rarely follow political boundaries. As the regional planning agency, the Commission was able to work across municipal boundaries and bring towns together to deal with this problem at the most effective and appropriate level-the watershed. The plan recommends actions to streamline the regulatory

process, make complex information more transparent and available to citizens, abate nitrogen-induced costs already impacting the region, provide more support to local community water quality efforts, and eliminate unnecessary costs.

Developing a path forward to reduce nitrogen loading to Cape Cod waters was an appropriate next step in what has been a decades-long effort to identify watershedwide sources of nitrogen and define associated water quality impacts on a watershed-bywatershed basis. Progress to

address water quality impacts was challenging. Residents had been unwilling to fund expensive wastewater plans and state regulations were inflexible to accommodate less expensive or non-traditional approaches to reduce nitrogen.

The 208 Plan Update reflects a new approach with five basic principles:

- 1. The plan is watershed based.
- 2. The plan leverages existing local plans by making use of the enormous amount of data and input already

CAPE COD REGIONAL POLICY PLAN

SECTION 7 COORDINATED REGIONAL AND LOCAL PLANNING

collected by Towns as part of their comprehensive wastewater management planning to date.

- 3. All solutions are considered. Everything has to be on the table. The plan takes into account all potential technologies and strategies that could be successful on Cape Cod. It evaluates each individually and then looks for appropriate places for its use as part of watershed scenarios.
- 4. The purpose of the plan is to set the parameters for the discussion of

- solutions on a watershed basis, and not to suggest an optimal solution. The solution is ultimately determined by the watershed communities.
- as part of every watershed scenario and the impact on individual property owners must be a primary concern. If a solution isn't affordable or the community isn't able or willing to fund it, it isn't doable.

The key to successful implementation of the 208 Plan Update is providing

a streamlined regulatory pathway for more efficiently and effectively achieving water quality goals through the development of targeted watershed management plans that address nutrient remediation through a variety of approaches. One aspect of the streamlined regulatory approach is the Commission's review of municipal water quality plans and projects, which are no longer reviewed as DRIs, but instead for consistency with the 208 Plan Update.

The full plan is available here: ccc-plans.org/208

COMPREHENSIVE ECONOMIC DEVELOPMENT STRATEGY

In 2009, Cape Cod was designated an Economic Development District creating new regional opportunity for Federal **Economic Development** funding for projects and programs consistent with the Comprehensive Economic Development Strategy (CEDS) for Cape Cod. This important and valued designation followed an intense stakeholder driven regional planning effort to adopt a CEDS for Cape Cod,

an economic blueprint for the region. The CEDS is an operational plan typically built on the policies and goals of the Regional Policy Plan thereby ensuring that the priorities, programs, and projects supported by the plan make advancements economically without undermining the region's most valuable and sensitive resources.

The CEDS planning effort on Cape Cod is led by the Barnstable County Economic Development Council and staffed by the Cape Cod Commission. The planning process and plan are informed by a comprehensive analysis of the region's economy, its strengths, opportunities, weaknesses, and threats. The result is an action plan and an evaluation process specifically designed to address priority issues through achievable projects and programs.

The CEDS is required by the US Economic Development Administration (EDA) to access funding for economic development planning and infrastructure construction. Together, the Cape Cod Commission and the Barnstable County Economic Development Council serve

the governing board of
the Cape Cod Economic
Development District and
jointly approve a CEDS 5-year
plan, oversee implementation
and approve annual reports
documenting progress
supporting the region's
Economic Development
Strategy.

REGIONAL ECONOMIC STRATEGY EXECUTIVE TEAM

The Commission established the Regional Economic Strategy Executive Team (RESET) program in 2009 as a multi-disciplinary comprehensive program SECTION 7 COORDINATED REGIONAL AND LOCAL PLANNING

CAPE COD REGIONAL POLICY PLAN

providing direct municipal support and responding to community needs. RESET is a partnership with communities that leverages Commission resources and expertise to address challenges ranging from water quality and transportation infrastructure to zoning and building design to promote the town's economic and community potential.

RESET is an opportunity for a community to analyze a specific area using a team of Commission staff with policy, economic development, planning, regulatory, and technical expertise to provide specific, tangible deliverables—including site plans, research reports, land use plans, and recommended changes to bylaws—that

are tailored to the needs of a specific town. RESET projects are directed by town staff and officials and the RESET program has been utilized widely across Barnstable County. Projects have stimulated regional and local regulatory streamlining for developments with highwage jobs with resulting job retention and growth, facilitated zoning changes promoting compact mixed-use development in village centers, promoted redevelopment of underperforming properties, and supported local and regional capital investment.

REGIONAL HOUSING NEEDS ASSESSMENT

The Commission recognizes that a balanced housing market is a critical component of a strong and stable economy. The 2017 Regional Housing Market Analysis is the first regional benchmark analysis of Barnstable County's housing market. The study establishes a fact-based analysis of the current housing market and forecasts the housing supply and demand over the next ten years across all 15 municipalities and the four main subregions of Cape Cod (Upper, Mid, Lower, and Outer). The study identifies current and potential gaps between what households are willing and able to pay (demand) versus the supply of housing stock to meet demand.

The study involved the development of an economic and demographic forecast model specific to Barnstable County, which provides estimates for the population by age cohort, workforce and employment rates, household formation rates, household incomes, and housing unit supply for each municipality and for Barnstable County. From the 2015 baseline year, the study shows the greatest housing stress is currently felt by those earning 80% or less of Barnstable County's median income. In ten years, the stress on the lower end of earners increases and deserves continued attention. More striking, however, is how housing stress climbs through higher tiers of income. By 2025 the greatest increase in burdened households is with those earning 100%-120% of the projected median income.

This regional and sub-regional housing demand and supply forecast can help housing supply planning efforts to meet both existing and anticipated demographic, economic, and housing needs. With this improved and current data and forecasts, the Regional Housing Market Analysis provides the foundation for considering the housing market as a regional system, recognizing that the region will not meet its goals working as 15 independent communities but as a region with subregional strategies. The study provides a standardized assessment available on a town-by-town basis that will foster local housing goals and decisions that fit within a regional framework, as well as

suggested regional strategies for addressing the County's housing needs.

The recommended regional strategies include:

- promoting increased diversity of housing options so that seniors and others looking to downsize have more options
- promoting increased diversity of multifamily housing to improve affordability
- conducting a detailed housing market preference study to further understand what Cape residents want in their housing stock
- promoting better housing design that is more efficient and complements the region's unique character

- developing strategies and policies to avoid displacement
- developing tools and strategies for seasonal housing
- developing regional and sub-regional housing supply goals

Looking ahead, it is anticipated that Cape Cod will experience a continued decline in household size driving demand for more diversity in housing units, an increase in housing stress to pay for housing by those earning higher than median wages, and an estimated net new demand for 2,715 year-round housing units. The existing inventory (supply) of homes

will not meet the community and economic needs of the region in the future.

The regional housing market analysis laid the groundwork for a regional housing plan. The analysis provided a detailed explanation of the housing challenges and needs across the region. While it outlines next steps for addressing these challenges, it does not specify actions needed to accomplish these next steps. A regional housing plan will lay out specific actions and policies to implement at both the

regional and local level to improve housing affordability and availability.

To address this regional challenge, the Commission could consider a planning goal to create a regulatory and investment framework supporting additional housing units in Community **Activity Centers across** Cape Cod. In Community Activity Centers, new housing could be created through infill and redevelopment to meet documented need for compact, year-round dwelling units varied in size. In some areas of the region,

alternatives such as Accessory
Dwelling Units and the
conversion of seasonal cottage
colonies to year-round homes
will fulfill the need for yearround housing.

The Commission will work to address housing goals through the Goals and Objectives in this RPP update and through the review and approval of local comprehensive plans. In identified Community Activity Centers, the Commission will request a housing supply analysis, updated housing production plans when appropriate, and a plan for infrastructure investment

and zoning reform to improve opportunities for diverse housing production. These planning activities will support growth in Community Activity Centers in need of year-round population to support vibrant and diverse local economies.

In addition, there is a need for all segments of the community to support the creation of more affordable housing, particularly employers creating lower wage jobs that thereby increase pressure on the affordable housing market. The Commission recommends an evaluation of the region's employment and real estate

market and the best practices for concurrency or nexus charges for affordable housing necessitated by the creation of new low-wage jobs.

REGIONAL TRANSPORTATION PLAN

Another example of an area where the Commission can effectively bring together towns to address more detailed planning across municipal boundaries to further regional goals is transportation. The 2016 Cape Cod Regional Transportation Plan (RTP) was adopted by

the Cape Cod Metropolitan
Planning Organization, the
regional governing body
established by federal
law to oversee regional
transportation planning and
recommend the distribution of
transportation funds locally.

As a document that establishes the vision for the transportation system for the region, the RTP sets the framework for development of the transportation network on Cape Cod. This framework is built on a performance-based planning approach with a vision statement, goals,

objectives, performance measures and targets, strategies, and policies.

The overarching vision of the RTP is as follows: The Cape Cod Metropolitan Planning Organization envisions a transportation system that supports the environmental and economic vitality of the region through infrastructure investment that focuses on livability, sustainability, equity, and preservation of the character that makes our special place special.

SECTION 7 COORDINATED REGIONAL AND LOCAL PLANNING

CAPE COD REGIONAL POLICY PLAN

The goals of the RTP expand on the vision statement in seven areas of emphasis: safety, environmental and economic vitality, livability and sustainability, multimodal options/ healthy transportation, congestion reduction, system preservation, and freight mobility.

The performance measures and targets established in the RTP are quantifiable targets that the region will work to achieve over the coming years through implementation of a series of strategies and policies. Strategies to

reach these targets include prioritizing projects that "improve access to and within village centers." This language was added to the 2016 RTP update to definitively link transportation and land use planning in the region.

The anticipated funding in the region over the next 25 years totals approximately \$1.1 billion. This total includes spending on transit, roadways, bridge, sidewalk, and multiuse path projects. The majority of projects funded through this plan have supported projects that improved access to the region's activity centers.

The full plan is available at ccc-plans.org/rtp.

CLIMATE CHANGE PLANNING

Since the 2009 RPP update, the Commission has been actively engaged in several planning efforts to increase the region's resilience to the effects of severe storms and climate change. Climate adaptation principles, policies, and actions in the 2018 RPP update reflect recommendations from the 2011 Massachusetts Climate Change Adaptation Report as well as input from stakeholders during the

early RPP public outreach process. The 2018 RPP, by including actions related to climate change mitigation and adaptation as well as through the following work described, positioned the agency to initiate development of a dedicated climate action plan for the region.

Resilient Cape Cod Project

In 2015, the Cape Cod
Commission and several
partners were awarded
a three-year grant from
the National Oceanic and
Atmospheric Administration
(NOAA) to complete the

CAPE COD REGIONAL POLICY PLAN

SECTION 7 COORDINATED REGIONAL AND LOCAL PLANNING

Resilient Cape Cod planning project (ccc-plans.org/ resilientcapecod). The purpose of the Resilient Cape Cod project is to investigate the environmental and socioeconomic effects of local and regional coastal resiliency strategies, and to share this information broadly through stakeholder engagement, public outreach, and a local pilot project. The project team has compiled a database of adaptation strategies for Cape Cod coastal resource areas, produced an online storymap (ccc-plans.org/ coastalimpacts) illustrating the

challenges from coastal

threats that Cape Cod faces, and is developing an online decision support tool to help facilitate local discussions about the tradeoffs associated with implementing different adaptation strategies. The work, including a series of stakeholder workshops held during the stormy winter of 2018, has highlighted and helped prioritize future actions that Cape communities should take to improve their readiness for and resilience to future storm and sea level rise threats.

Some of the needs identified for ongoing planning, education, and outreach include: improving broader public understanding of the threats to and vulnerabilities of Cape Cod, sharing information about possible actions that may be taken to improve coastal resiliency, streamlining regulation including taking a regional view to managing sediment, addressing public/private interests in the coast, and considering a coastal District of Critical Planning Concern designation.

Multi-Hazard Mitigation Planning

The Commission has provided technical assistance to eight Cape communities to prepare multi-hazard mitigation plans. These plans, customized by each community to address local threats, are focused on addressing vulnerabilities to sea level rise, coastal storms, and erosion. Completed plans are submitted to the Massachusetts Emergency Management Agency and the Federal Emergency Management Agency for approval. Pending the availability of funds, MEMA conducts annual sub-grant

programs for the Hazard Mitigation Grant Program; Flood Mitigation Assistance Grant; and the Pre-Disaster Mitigation Grant.

The federally-funded Hazard
Mitigation Assistance
programs provide significant
opportunities for communities
to reduce, minimize, or
eliminate potential damages
to property and infrastructure
from natural hazard events.
Funding for hazard mitigation
plans and projects can
reduce overall risks to the
population, structures and
infrastructure, while also
reducing the reliance on

taxpayer-funded federal disaster assistance for disaster recovery. Communities must have a FEMA-approved Local Natural Hazard Mitigation Plan in place prior to applying for funding (ccc-plans.org/MA-HMAgrants).

The Commission is committed to ongoing technical assistance to support Cape communities as they prepare and re-examine multi-hazard mitigation plans as they are updated every five years.

Municipal Vulnerability Preparedness Planning

The Municipal Vulnerability Preparedness grant program (MVP) provides support for cities and towns in Massachusetts to plan for resiliency and implement key climate change adaptation actions for resiliency. The state awards communities with funding to complete vulnerability assessments and develop action-oriented resiliency plans. Towns choose the provider of their choice from a list of certified providers. Communities who complete the MVP program become certified as an MVP

community and are eligible for MVP Action grant funding and other opportunities (ccc-plans.org/MA-MVP).

The Commission is a certified provider and is available to assist communities in completing the assessment and resiliency plan using the Community Resilience Building Framework (ccc-plans.org/MA-MVP-CRB). As of 2018, nine Cape communities have become eligible to participate in the MVP program.

Renewable Energy Planning and Development

Ten years ago, Massachusetts became one of the first states in the nation to move forward with a comprehensive regulatory program to address climate change upon passage of the Global Warming Solutions Act (ccc-plans.org/MA-GWSA).

The GWSA required the Executive Office of Energy and Environmental Affairs, in consultation with other state agencies and the public, to set greenhouse gas emission reduction goals for the

Commonwealth to achieve reductions of between 10-25% below statewide 1990 GHG emission levels by 2020, and 80% below statewide GHG emission levels by 2050.

To help meet these greenhouse gas emission reduction goals, the Massachusetts Renewable Energy Portfolio Standard (RPS) was one of the first programs in the nation to require a certain percentage of the state's electricity come from renewable energy. The Massachusetts RPS requires retail electricity suppliers (both regulated

distribution utilities providing basic service supply, and competitive suppliers) obtain a percentage of the electricity they serve to their customers from qualifying renewable energy facilities. Suppliers meet their annual RPS obligations by acquiring a sufficient quantity of RPSqualified renewable energy certificates (RECs) that are created, traded, and tracked at the New England Power **Pool Generation Information** System. In order for retail electricity suppliers to meet their annual compliance obligations established by the RPS, they must purchase

CAPE COD REGIONAL POLICY PLAN

SECTION 7 COORDINATED REGIONAL AND LOCAL PLANNING

a number of RECs equal to the percentage of their retail sales for that particular compliance year (ccc-plans. org/MA-RPS-summaries).

The Massachusetts Renewable Energy Portfolio Standard created a market for the development of renewable energy generation facilities, including solar photovoltaic, battery storage, wind energy, or other technologies to sell qualified RECs to retail electricity suppliers.

In 2016, Massachusetts further defined its commitment to renewable energy and greenhouse gas reductions through the passage of An Act Relative to Energy Diversity (ccc-plans.org/MA-energy-diversity), which sought to stabilize electric rates, ensure a diversified energy portfolio for the Commonwealth, and embrace technologies like offshore wind and energy storage.

The Commission has reviewed several renewable energy generation projects as
Developments of Regional Impact since the creation of the Massachusetts
Renewable Energy Portfolio

Standard. However, most solar photovoltaic projects have been on greenfield sites with potential natural resources or water resource impacts. Siting of land-based wind energy conversion facilities on Cape Cod has also been challenging due to potential community character, noise and other environmental issues.

The best way to contribute to a fossil fuel-free electricity supply is to encourage more on-site renewable energy generation. To assist in the planning, siting, and design of on-site renewable energy facilities, the Commission will develop a technical bulletin for Developments of Regional Impact and/or use by municipal officials in local review including:

- siting and building design consideration to accommodate future solar installations;
- identification of potential grayfield sites such as parking lots that would be suitable for installation of solar photovoltaic panels;

 siting and design considerations for public electric vehicle charging stations and energy storage.

The Commission will consider requiring an energy audit for development and redevelopment reviewed as Developments of Regional Impact.

Green Communities

The Green Communities Act (GCA) was a comprehensive reform of the Massachusetts energy marketplace that will improve the state's ability to meet the GWSA targets. The

GCA promotes an expansion in energy efficiency, supports the development of renewable energy resources, creates a new greener state building code, removes barriers to renewable energy installations, stimulates technology innovation, and helps consumers reduce electric bills. It also created the Green Communities Program, providing Massachusetts cities and towns with energy efficiency and renewable energy funding opportunities (ccc-plans.org/MA-greencommunities).

As of 2018, four Cape communities have become Green communities under the Green Communities Act and three towns are in the designation process. The Commission encourages Cape towns to become Green Communities and can assist in providing education for the development community about the state building code requirements.

SECTION 7 COORDINATED REGIONAL AND LOCAL PLANNING

CAPE COD REGIONAL POLICY PLAN

CAPE COD OCEAN MANAGEMENT PLAN

The 2011 Cape Cod Ocean
Management Plan (CCOMP)
provides guidance on the
use and protection of Cape
Cod's ocean resources, again
coordinating what happens
at the local level with the
regional interests and goals.
The CCOMP establishes policy
and provides technical support
for review of the development
activities allowed in the state's

ocean waters. Revisions to the Massachusetts Ocean Sanctuaries Act in 2008 allowed for sand and gravel mining, and cable and pipeline installation in state waters. The Ocean Act also allowed for the installation of community wind turbines projects, consistent with the community's definition of "appropriate scale." The CCOMP provides Barnstable County's definition of

appropriate scale for renewable energy projects in Cape Cod waters.

In order to ensure that oceanbased development is balanced with resource protection, the Commission led a District of Critical Planning Concern (DCPC) process to identify significant marine resources and engage the community in establishing appropriate policies for managing offshore development. The Cape Cod Commission
assembled a Policy Committee
consisting of elected officials
representing each of the
region's 15 towns. In addition,
Technical Workgroups in the
areas of natural resources,
visual considerations and
renewable energy were
created to explore specific
topics relevant to the CCOMP.
A stakeholders group was
invited to participate and
comment on the work of
the Policy Committee and

Technical Workgroups
throughout the planning
process. Following 15 months
of public meetings, workshops,
and forums, the Policy
Committee adopted specific
recommendations directed
at protecting resources and
activities critical to Cape Cod.
The Cape Cod Commission
incorporated the Policy
Committee recommendations
into the CCOMP to guide
future decisions about

appropriate development activities in Cape Cod's ocean waters.

As a CCOMP action item, the Commission carried forward recommendations for revisions and additions to the RPP to address development in marine and coastal resource areas. The Assembly of Delegates adopted the recommended amendments to the RPP in 2012 creating a new marine resources section

establishing review standards for sand and gravel mining and cable and pipeline installation. A future action item called for incorporating standards for offshore renewable energy development. This 2018 RPP addresses these limited allowable ocean activities through goals and objectives for ocean resource protection and capital infrastructure.

FRAMEWORKS FOR ENHANCED COORDINATION OF REGIONAL AND LOCAL PLANNING

REGIONAL CAPITAL PLANNING

As fifteen independent local governments and numerous sub-districts prepare capital infrastructure and facilities plans across the region, the Commission recognizes the opportunity for local and regional coordination and collaboration. Typically, the Capital Infrastructure Plan is a short-range plan (five to seven years) that lists specific capital projects and purchases needed by the town for which funding is needed. At the regional scale, a Regional Capital Plan's objective is to have towns include a broader, more policy-oriented capital infrastructure plan within

their local comprehensive plans that is consistent with the RPP and the goals of the Regional Capital Plan. Regional capital planning must be consistent with protecting the region's natural and historic resources, and advancing a balanced economy, mixed housing options, and social diversity.

The Commission is charged under the Cape Cod Commission Act with anticipating, guiding and coordinating the rate and location of development with the capital facilities necessary to support development. To carry out this charge, the Commission will develop a regional framework to characterize, quantify, plan, and advocate for regional infrastructure and facilities and the planning, forecasting, decision making and financial tools to support Cape Cod communities.

With this framework, Cape
Cod communities will realize
long-term sustainable
economic development
through the strategic
provision of high quality
and safe infrastructure
that advances social equity,
economic and social diversity,
disaster resiliency, and
environmental health.

The Regional Capital Plan will consider the following:

■ Long-Term Sustainability

Locate infrastructure to effectively protect natural resources, strengthen activity centers and villages, discourage low density sprawling development, reduce disaster vulnerability, support infrastructure that reduces reliance on fossil fuels, and preserve historic structures and pre-1950s development patterns.

Existing Needs First

Build infrastructure to serve existing needs and mitigate impacts of current development as well as re-development and new development within identified activity centers.

■ Safety, Access, Equity & Quality

Provide safe, accessible, high quality services, facilities, and infrastructure that meet the needs of all residents and property owners.

■ Efficiency & Affordability

Invest in, locate and use Infrastructure efficiently to limit over building, reduce long-term costs, promote community interaction, and direct growth into activity centers.

Resilience

Incorporate changing conditions and risks posed by deliberate attacks, accidents, or naturally occurring threats or incidents, including those associated with climate change, into infrastructure planning and investments to reduce current and future loss of life, and the other costs of recovery, and to promote economic stability.

SECTION 7 COORDINATED REGIONAL AND LOCAL PLANNING

CAPE COD REGIONAL POLICY PLAN

STREAMLINED LOCAL COMPREHENSIVE PLANNING

In addition to coordinating issue-specific plans across the region, the Commission works to coordinate local comprehensive plans, which plan across multiple issue areas but focus within town boundaries, with the goals and vision of the RPP. The Act identifies the minimum criteria required for a local comprehensive plan (LCP) to be consistent with the Act. The two items specifically identified within Section 9 of the Act for LCP compliance are: (1) a plan for capital facilities which will be necessary to accommodate growth both in that

municipality and throughout
Barnstable County; and (2)
a plan to provide for the
development of low and
moderate-income housing
consistent with local needs.
The Act further requires
that the LCP, which must be
adopted by Town Meeting or
legislative body, be consistent
with the Regional Policy Plan
and goals of the Act.

Once an LCP has been adopted by the town, "within two years or further time as the Commission may allow" the town must ensure its development bylaws are consistent with its local comprehensive plan.

While most towns on Cape Cod have adopted local comprehensive plans in the past, some of these plans were not certified by the Commission as consistent with the Act and Regional Policy Plan. In addition, the majority of towns have not updated their LCPs on a regular basis to reflect new trends or issues that are important to the community or to reflect changes to regional goals. Through this 2018 RPP update and subsequent revisions to the LCP Regulations, the Cape Cod Commission is seeking to:

 Encourage more towns to adopt or update LCPs consistent with the Act

- Streamline the process for adoption and approval
- Accelerate and coordinate the planning process within Community and Industrial Activity Centers as well as other Placetypes
- Stimulate the production of more diverse housing types in activity centers
- Coordinate public infrastructure investment within activity centers
- Ensure local bylaws are consistent with the RPP and LCP for targeted areas

To help streamline the process for developing local comprehensive plans consistent with the Act and RPP, the Commission will

develop a template for use by the towns in developing their local comprehensive plans. The Commission will also assist in developing local comprehensive plans when requested by the towns and continue to offer support for planning and technical assistance for activity center development as well as other Placetypes, including assistance with zoning changes needed to support mixed-use and residential development in selected areas.

The Commission is developing web-based tools that will help towns better understand their communities' assets and opportunities, including measures of activity center health, wealth, and

economic resilience. These tools will help guide towns in developing a vision for communities in their local comprehensive plans.

LOCAL CAPITAL FACILITIES PLANNING

To ensure coordination of the RPP with local planning, the Commission will develop a template for the elements of a local capital facilities plan that will be a required element of a certified local comprehensive plan. The components of a local capital facilities plan may include the following:

 Identification of local infrastructure needs to support development/ redevelopment in

- activity centers and/ or other areas identified by the community;
- Ensure 208 Plan consistency through a targeted watershed plan to address nitrogen loads, including a timeframe for meeting the plan;
- Identification of transportation projects that support regional/ local activity centers;
- Provision of adequate water supplies to support existing/future needs;
- Capital budget for local infrastructure needs and timeframe.

PLANNING TOOLS AVAILABLE THROUGH THE ACT

DISTRICTS OF CRITICAL PLANNING CONCERN AS A PLANNING TOOL

Section 10 of the Cape Cod Commission Act authorizes the Commission to propose the designation of certain areas which are of critical value to Barnstable County as
Districts of Critical Planning
Concern (DCPC). The DCPC
is a powerful planning tool
that allows a town or a group
of towns, as well as the
Commission to plan for and
adopt special regulations
designed to protect important
resources and foster
sustainable development
without the pressure of
pending development permits.
Once nominated by the
town, a limited moratorium

allows uses/activities not detrimental to the purposes of the district to proceed while the town completes the planning and outreach and develops new regulations designed specifically for the district. The DCPC process also ensures substantial public input to ensure that the district boundaries, purposes and ultimately implementing regulations adequately reflect towns' vision and goals.

If a DCPC is designated by the Assembly of Delegates, the town has 12 months (with the potential for a 3-month extension) to adopt implementing regulations for the district. Implementing regulations, adopted at Town Meeting, also eliminate grandfathering protection, which is particularly useful for an area the community would like to see redeveloped in a manner more consistent with local goals and community

character. An example of this type of District designation is the Town of Eastham commercial area that was designated as an Economic or Development Resource District, Affordable Housing, and Transportation Management District in 2017. The goals of this District were to promote sustainable economic development, affordable housing, and

transportation management along a heavily traveled section of U.S. Route 6.

DCPCs can be designated for many different purposes tailored to the needs of the community, including:

- Water resource district
- Aquaculture resource district
- Agricultural resource district

- Wildlife, natural, scientific, or ecological resource district
- Economic or development resource district
- Affordable housing resource district
- Major public investment district
- Hazard district
- Waterfront management/ watersheet zoning district

SECTION 7 COORDINATED REGIONAL AND LOCAL PLANNING

CAPE COD REGIONAL POLICY PLAN

- Downtown commercial revitalization district
- Transportationmanagement district

A total of ten (10) DCPCs have been designated for various purposes by the towns since the Act was adopted, including a townwide DCPC in Barnstable for affordable housing and growth management.

The first Cape-wide DCPC to be designated was the Ocean Management Planning DCPC (ccc-plans.org/OMP) nominated by the Barnstable

County Commissioners in December 2009. The County Commissioners made the nomination in anticipation of the final Massachusetts Ocean Management Plan (ccc-plans. org/MA-OMP) on December 31, 2009. The state created the Ocean Management Plan to coordinate and promote certain types of development within Massachusetts ocean waters. The second Capewide DCPC to be designated was the first one nominated by the Cape Cod Commission. The first DCPC proposed by the Commission was the Cape-wide Fertilizer DCPC in

response to state legislation that would remove the ability of individual communities to regulate fertilizers. The DCPC designation gave Cape communities an opportunity to adopt local bylaws consistent with the implementing regulations; town participation was voluntary. A total of seven communities adopted local fertilizer bylaws under the DCPC, and Falmouth and Orleans received grandfathering protection for their nitrogen management bylaws.

For more information on DCPCs, go to: ccc-plans.org/DCPC

DEVELOPMENT AGREEMENTS

A development agreement is a voluntary, binding contract between a public permitting authority or authorities, including the Commission, and a person who owns or controls property within the authority's jurisdiction, for the purpose of establishing the regulations and conditions that will govern proposed development on the property during the term of the agreement. Development

agreements are specifically authorized under the Cape Cod Commission Act and Chapter D of the Commission's regulations, but not generally under Massachusetts zoning law and other state land use laws and regulations. Development agreements are well-suited to complex, longterm projects designed to be constructed in phases. Where the Commission determines that a project under its jurisdiction is appropriate for a development agreement, the development agreement

review and approval process is in place of the DRI review and approval process.

Development agreements
have several main purposes
and distinct benefits to public
authorities and developers.
For the developer, a
development agreement:

- provides a level of flexibility in permitting and developing a project;
- provides assurance that applicable development regulations will not change over the duration of the agreement; and,

 vests land use development rights applicable to a property for the duration of the agreement.

For public authorities, the development agreement process allows for a more comprehensive and holistic approach in reviewing the totality of a project, and for clearer expectations about provisions for infrastructure and mitigation associated with a project.

CAPE COD REGIONAL POLICY PLAN

SECTION 7 COORDINATED REGIONAL AND LOCAL PLANNING

GROWTH INCENTIVE ZONES

To encourage concentrated growth in desirable and well-suited areas, towns may apply for designation of a Growth Incentive Zone (GIZ) as outlined in Chapter G of the Cape Cod Commission's regulations. The designation process requires a thorough analysis of the existing or planned infrastructure, bylaws, capital facilities for the proposed GIZ area and

its suitability for increased development. A successful application process and resulting designation raises certain DRI review thresholds so that fewer development projects in the area require Cape Cod Commission review. This minimized review process may make the GIZ area more appealing to developers, promoting development where the town desires and can efficiently support growth.

MUNICIPAL REVISIONS TO DEVELOPMENT OF REGIONAL IMPACT THRESHOLDS

Chapter H (of the Code of Cape Cod Commission Regulations of General Application) allows the Commission or a town to propose revisions to certain of the mandatory DRI review thresholds of general applicability contained in Chapter A (Enabling Regulations Governing Review of Developments of Regional

Impact). Revisions may be proposed within a range of building gross floor area and unit count parameters set out in Chapter H and may be established for discrete areas within larger areas mapped and designated by the Commission for such revisions (such as Economic Centers). Generally, the review thresholds that may be revised deal with mixed use, commercial or residential development. Review thresholds may be revised

'lower' so that the Commission has greater jurisdiction to review development in areas with an abundance of identified built or natural resources or may be revised 'higher' in developed areas where less Commission regulatory oversight is appropriate in terms of the potential for regionally significant impacts from development in such an area. The Commission ultimately must hold a hearing on and approve proposed revisions if

they are to become effective. In proposals to revise DRI review thresholds under Chapter H, the Commission reviews the built and natural resources, infrastructure, regulation and planning associated with an area proposed for DRI threshold revision.

To date, the Commission has approved one Chapter H designation for four areas on the Upper Cape (in Falmouth, Sandwich and Bourne) in order to further economic development in such areas and in the region. In these areas, net new building development up to 40,000 square feet gross floor area, which proposes research and development or light manufacturing use, is allowed without the requirement for DRI review.

Cape Cod Placetypes

SECTION 8 CAPE COD PLACETYPES

CAPE COD PLACETYPES

Cape Cod Placetypes

While the RPP goals apply across the region, the region is comprised of many different and unique places. To recognize and support these unique areas, this RPP identifies areas with similar natural and built characteristics as distinct "Placetypes," which serve as a conceptual framework for regional planning and regulation. A character description for each Placetype is provided along with a vision for each area consistent with the region's growth policy. Additionally, each character description lists strategies for creating and enhancing the unique characteristics of these Placetypes.

NATURAL AREAS

RURAL DEVELOPMENT AREAS SUBURBAN DEVELOPMENT AREAS

HISTORIC AREAS

MARITIME AREAS

COMMUNITY ACTIVITY CENTERS INDUSTRIAL ACTIVITY
CENTERS

MILITARY AND TRANSPORTATION AREAS

Natural Areas are generally the region's least developed and most sensitive areas. Rural Development
Areas are defined by a
high percentage of open
lands and sparse building
development patterns that
contribute to the unique
rural and scenic character
of the region.

Suburban Development
Areas include residential
neighborhoods built
primarily between the
1950s and 1990s as well
as automobile-oriented
commercial and light
industrial development
established during the
same time period.

Historic Areas consist of concentrations of historic structures, including local and/or National Register districts located in a small-scale village setting.

Maritime Areas are clusters of commercial and mixed-use development that contribute to Cape Cod's working waterfronts and harbors.

Community Activity
Centers are areas with a
concentration of business
activity, community activity,
and a compact built
environment. Buildings
are generally smaller in
scale and connected by a
network of streets, ways or
alleys.

Industrial Activity Centers are lands containing industrial uses that are suitable for future industrial activity as well as emerging industries. Military and Transportation
Areas consist of large land
areas developed with and
devoted to infrastructure
such as airports, transfer
stations, waste disposal
facilities, and Joint Base
Cape Cod.

CAPE COD REGIONAL POLICY PLAN

SECTION 8 CAPE COD PLACETYPES

Natural Areas

Natural Areas are generally the region's least developed and most sensitive areas. These identified areas comprise natural shoreline, barrier beaches, banks, and dunes, areas with highest habitat value and natural landscapes, undeveloped lands in wellhead protection areas, buffers to wetlands and vernal pools, and undeveloped areas subject

to flooding. The vision for
Natural Areas is to minimize
adverse development impacts
to sensitive resource areas,
to preserve lands that define
Cape Cod's natural landscape
and contribute to its scenic
character, and to improve the
Cape's resilience to severe
storms and the effects of
climate change. Natural Areas
are lands with the highest

significance for resource protection or conservation and are appropriate for permanent protection through acquisition and conservation restriction or for transfer of development rights to less vulnerable areas.

The Commission identified these areas by mapping BioMap2 Core Habitat and Critical Natural Landscapes, vernal pools and the 350-foot buffer of vernal pools, protected open space, wetlands and the 100-foot buffer to wetlands, undeveloped lands in wellhead protection areas, and undeveloped lands in FEMA flood zones.

6. Limit development to protect natural resource functions and encourage removal of development where appropriate

NATURAL AREAS PLACETYPE STRATEGIES

- 1. Accommodate sea-level rise by allowing low-lying areas to absorb rising seas and wave action/tides from severe storms
- 2. Provide natural areas for plant and wildlife habitat

- 3. Retain natural cover and restore wooded areas
- 4. Integrate green infrastructure practices to accommodate sea-level rise and storm events
- 5. Provide areas for passive recreation such as walking and hiking

SECTION 8 CAPE COD PLACETYPES

CAPE COD REGIONAL POLICY PLAN

Rural Development Areas

Rural Development Areas are defined by a high percentage of open lands and sparse building development patterns that contribute to the unique rural and scenic character of the region. Rural Development Areas may include rural historic areas of the Outer Cape including the Cape Cod National Seashore

and large agricultural areas in parts of Falmouth, larger lot residential development, lands in active agricultural production, significant tracts of wooded areas without identified special habitat, and cultural landscapes that help define the region's history. The vision for Rural Development Areas is to ensure that

development is located, sited, and scaled appropriately to avoid impacts on scenic and/or cultural resources, and to help maintain the economic diversity that agriculture can provide for the region including opportunities for the continuation of traditional

agricultural occupations, and for the availability of locally-grown food.

RURAL DEVELOPMENT AREAS PLACETYPE STRATEGIES

- Preserve lands in agricultural production to encourage locally-grown food
- 2. Protect agricultural lands and natural cover to preserve existing natural functions
- 3. Ensure development respects the surrounding landscape by using existing topography to guide the development layout, cluster the development on the site, and preserve wooded buffers
- 4. Protect scenic and cultural landscapes and historic structures within these landscapes that contribute to the Cape's unique character and history
- 5. Provide connections to adjacent open space lands to create an open space network with opportunities for passive recreation such as walking and hiking

CAPE COD REGIONAL POLICY PLAN

SECTION 8 CAPE COD PLACETYPES

Suburban Development Areas

Suburban Development
Areas include residential
neighborhoods built primarily
between the 1950s and
1990s as well as automobileoriented commercial and
light industrial development
established during the same
time period. These areas are
more densely developed than
Rural Development Areas and

may include curvilinear streets and cul-de-sacs, but generally lack an interconnected street network. Suburban Development Areas also have a patchwork of fragmented open space consisting of buffer strips or landscaped areas. Parking in commercial and industrial Suburban Development Areas is typically

located in front of the site
with buildings that are highly
visible from the roadway.
The vision for these areas
is to redevelop commercial
and industrial Suburban
Development Areas consistent
with the community's vision
to create more concentrated
nodes of development, and
to improve their design

and function so that they are better integrated into surrounding neighborhoods. The vision for residential Suburban Development Areas is to cluster residential development to reduce the development footprint and provide high-quality open space.

1. Encourage redevelopment of existing commercial suburban development with denser clusters of buildings surrounded by less developed areas 2. Integrate existing commercial development into surrounding areas with mixed-use and/or residential development providing greater housing opportunities and employment diversity

3. Create pedestrian and bicycle amenities within and between developments to improve safety for all users and reduce auto dependence 4. Improve the design and function of commercial and industrial areas through landscaping, stormwater treatment, and building layout/design

SECTION 8 CAPE COD PLACETYPES

CAPE COD REGIONAL POLICY PLAN

Historic Areas

Historic Areas consist of concentrations of historic structures, including local and/or National Register districts located in a small-scale village setting. These areas are an important component of the region's history and Cape Cod character. The vision for

Historic Areas is to protect historic resources and to support infill development that respects the form, scale, and character of existing historic areas.

HISTORIC AREAS PLACETYPE STRATEGIES

- 1. Support infill development at appropriate scale and density to retain the vitality of these areas
- 2. Preserve the character and traditional function of historic areas
- 3. Encourage the re-use of historic structures to accommodate small businesses and/or greater diversity of residential opportunities

CAPE COD REGIONAL POLICY PLAN SECTION 8 CAPE COD PLACETYPES

Maritime Areas

Maritime Areas are clusters of commercial and mixeduse development that contribute to Cape Cod's working waterfronts and harbors. These areas help to define Cape Cod's unique maritime history, are an important component of the Cape's economy, and provide recreational opportunities

for both residents and visitors. Maritime areas will include both public and private harbors, marinas, and mooring fields and may extend to nearby commercial activity and historic maritime villages that contribute to the traditional character and economic success of the working waterfronts.

The vision for Maritime Areas is to support the fin- and shell-fishing industry as well as other commercial, recreational, educational, and research activities associated with the marine environment and to protect water dependent trades. Storm events and climate change, along with the use, scale and

transportation, energy, and

marine science focused

operations

form of adjacent development pose challenges to maintaining valuable maritime infrastructure and activities, as well as their character.

3. Preserve and/or expand public access to water/

beaches

4. Preserve historic structures

MARITIME AREAS PLACETYPE STRATEGIES

- 1. Encourage towns to develop and regularly update Harbor Plans
- 2. Identify harbor use policies that support traditional maritime activities while also accommodating other users, such as tourism,

SECTION 8 CAPE COD PLACETYPES CAPE COD PLACETYPES

Community Activity Centers

Community Activity Centers are areas with a concentration of business activity, community activity, and a compact built environment. Buildings are generally smaller in scale and connected by a network of streets, ways or alleys. Community Activity Centers are more walkable and densely developed than

other Placetypes and often contain concentrations of historic buildings that contribute to the Cape's unique character. Mixed commercial and residential uses make it possible to live and work within the same walking distance. Smaller parks provide greenspace and recreation within Community

Activity Centers, with ample access to transit, bike connections and sidewalks.

The vision for these areas is to accommodate mixed-use and multifamily residential development in a walkable, vibrant area, preserve historic buildings, and to provide diverse services, shopping, recreation, civic spaces,
housing, and job opportunities
at a scale of growth and
development desired by the
community, with adequate
infrastructure and pedestrian
amenities to support
development.

COMMUNITY ACTIVITY CENTERS PLACETYPE STRATEGIES

- 1. Encourage mixed-use commercial and residential development in a compact form to support a vibrant downtown area
- 2. Encourage development at a human scale that facilitates interaction and a sense of community
- 3. Develop infrastructure necessary to support greater density and mix of uses, including access to transit
- 4. Integrate pocket parks and create streetscapes that enhance the built environment and provide community gathering places

CAPE COD REGIONAL POLICY PLAN

SECTION 8 CAPE COD PLACETYPES

Industrial Activity Centers

Industrial Activity Centers are lands containing industrial uses that are suitable for future industrial activity as well as emerging industries. Industrial Activity Centers are lands without significant resource constraints, are areas with access to major highway corridors, and are of an adequate size to support

industrial uses. Industrial
Activity Centers include some
larger industrially-zoned
areas, as well as existing areas
designated under Chapter
H of the Commission's
regulations. These areas have
a well-developed internal
street network at a scale to
accommodate larger vehicles
and uses. The vision for

Industrial Activity Centers is to support their development as significant employment centers with adequate infrastructure. Industrial land uses such as manufacturing, assembly, storage, processing and/or contracting in these areas is generally incompatible with residential development

and should be appropriately separated and buffered from other uses.

INDUSTRIAL ACTIVITY CENTERS PLACETYPE STRATEGIES

- Maintain adequate buffers between industrial development and surrounding uses
- 2. Provide employee services and facilities and access to transit
- 3. Develop incubator spaces for emerging industry clusters and entrepreneurs
- 4. Plan for renewable energy generation facilities

SECTION 8 CAPE COD PLACETYPES CAPE COD PLACETYPES

Military and Transportation Areas

Areas consist of large land areas developed with and devoted to infrastructure such as airports, transfer stations, waste disposal facilities, and Joint Base Cape Cod. These areas have unique considerations such as access control, noise impacts, and flight path

restrictions. The vision for these areas is to support comprehensive master planning with community input, encourage growth of industries appropriate to the diversification of the regional economy, and encourage partnerships for use of shared infrastructure.

MILITARY AND TRANSPORTATION AREAS PLACETYPE STRATEGIES

- Ensure transportation routes provide safe and adequate access to and from these facilities
- 2. Support opportunities for shared infrastructure
- 3. Support development of renewable energy generation where appropriate

While these Placetypes
have been identified based
on the presence of similar
characteristics, there are
different scales, sizes, and
intensity of development
within each. For example, a
Community Activity Center
located in one town will
share characteristics with a
Community Activity Center in
another town, however, the

character of two Community
Activity Centers may be
very different: one may
be a historic village while
another may feel more like
a downtown area. While
this plan identifies centers
of activity at the regional
scale based on existing
characteristics, centers of

activity also exist or could be envisioned at a neighborhood or local scale.

Additionally, the identification of the Community Activity
Centers can help serve as an element or foundation for a community to plan for the area, but the identification of Community Activity Centers does not determine what

the vision for the area is or should be. Specific visioning for these and other areas should be conducted by the communities, with help from the Commission if desired.

Regional Regulatory Review

The Cape Cod Commission Act (Act) charges the Cape Cod Commission with reviewing certain proposed developments which, because of their size or other characteristics, are presumed to have development effects beyond their local communities. These proposed developments are called Developments of Regional

Impact (DRI). The DRI review requirements are set forth in Section 13(d) of the Act.

An important component of the Act's DRI review requirements is a review for consistency with the Regional Policy Plan in effect at the time a DRI is reviewed. The Commission regularly updates the RPP to establish a current and coherent set

of regional planning policies, goals, and objectives to guide development throughout Barnstable County. The RPP is implemented in large part through the Commission's regulatory program.

This RPP focuses on the review of developments in relation to their surroundings, which are determined based on the Cape Cod Placetype

within which the proposed project is located. Employing a context-sensitive review process will ensure that new development is harmonious with and enhances the unique character of the region and protection of its natural and cultural resources, which are critical to the regional economy and way of life.

THE ROLE OF THE GOALS AND **OBJECTIVES OF** THE RPP

This RPP has been drafted to align directly with the goals and purposes of the Act. Specifically, this RPP adopts goals and corresponding objectives under each goal to guide and plan for the

future of the region in a manner consistent with the vision and growth policy of the Commission.

Organized around the region's natural, built, and community systems, these goals and objectives form the structure upon which the region's planning work relies, guide implementation actions, and

provide a framework by which the regulatory review process takes place.

The Goals and Objectives in Section 6 of this plan are the measures by which the Cape Cod Commission will make its determination whether a DRI is consistent with the RPP; for purposes of DRI and other regulatory reviews undertaken by the

CAPE COD REGIONAL POLICY PLAN SECTION 9 REGIONAL REGULATORY REVIEW

Commission, consistency with applicable goals and objectives constitutes consistency with the RPP.

The Commission determines the applicability and materiality of the RPP's goals and objectives to a project on a case by case basis. As the RPP has broad, general application to DRIs and other regulatory matters of regional significance, not every goal or objective may apply, be material, relevant or regionally significant, or apply in the same way or with the same focus or extent to every project or designation, given the specific facts and circumstances present in any given project.

THE ROLE OF TECHNICAL GUIDANCE IN REGULATORY REVIEW

Separate from, but in support of this RPP, the Commission has developed Technical Guidance. The Technical Guidance contains Placetype Maps, Technical Bulletins and references to resource areas mapped by federal, state and local governments. There is a Technical Bulletin for each of the goals of the RPP. The primary application of the Technical Guidance is during DRI or other regional regulatory review, and its primary purpose is to assist the Commission in its determination of whether a project is consistent with applicable RPP goals and

objectives, and alternatively, to detail how an applicant could design and pursue its project to meet the applicable RPP goals and objectives. The Technical Bulletins detail methods by which the goals and objectives of the RPP may be met. Except where otherwise specified in the Technical Bulletin, the methods by which goals and objectives of the RPP are met are not prescriptive, but rather are examples of methods that further the goals and objectives of the RPP and assist in evidencing consistency with the RPP. Applicants may work with the Commission to develop alternative methods of evidencing RPP consistency. In some limited circumstances, there may be methods that, if determined applicable, are considered

essential to achieving a particular goal and objective, and therefore required to be implemented; these are noted within the text of the applicable Technical Bulletin.

THE ROLE OF THE CAPE COD PLACETYPES IN REGULATORY REVIEW

Cape Cod Placetypes is an organizing principle that informs the Commission's regulatory review. The same Placetypes discussed in Section 8 of this plan, which frame the goals and objectives for land use form and function, are incorporated into the review of DRIs under the RPP. The Placetypes are determined in two ways; some are depicted on a map adopted

by the Commission as part of the Technical Guidance for review of DRIs, and the remainder are determined using the character descriptions set forth in Section 8 of this plan and the Technical Guidance. Placetype maps will be reviewed and updated as appropriate within 24-36 months after adoption of the RPP.

The Placetype for a given project is established at the outset of DRI review and provides the lens through which the Commission will review the project under the RPP. The applicability of goals and objectives may vary based on how projects are classified by Placetype. The means for achieving consistency with these goals and objectives may vary from site to site and

project to project, typically depending on the relevant Placetype and whether certain sensitive resources are present on a given project site.

THE ROLE OF RESOURCE AREAS IN REGULATORY REVIEW

Also contained within the Technical Guidance are resource areas which illustrate resources such as Zone II water supply areas, rare species habitat, flood hazard zones, and wetland resource areas. These areas are identified throughout the Technical Guidance and are also used as a lens by which DRI review is conducted when identified. Placetypes and resource areas may be

amended from time to time as new information becomes available.

RPP CONSISTENCY AND PROBABLE BENEFIT/ DETRIMENT DETERMINATIONS

In order to grant DRI
approval, the Act requires
that the Commission find
that the probable benefit
of a proposed development
is greater than its probable
detriment. The Commission
must also find that a proposed
development is consistent
with the RPP (among other
stated requirements). This
RPP update provides a
goal-oriented approach to
DRI regulatory review. It is

SECTION 9 REGIONAL REGULATORY REVIEW CAPE COD REGIONAL POLICY PLAN

intended that this approach will provide the Commission with more flexibility in determining whether proposed development is consistent with the RPP when considering the particular location, use and impacts associated with that development.

The Commission's review and analysis of a DRI under the RPP goals and objectives also inform its benefits/detriments analysis and determination. In considering the impacts of a development, the Commission will consider the various goals and objectives in the

RPP applicable to a project in order to determine whether the project is consistent with the RPP, as the goals and objectives are not separate and independent from one another, but instead constitute a coherent, inter-related and integrated approach to planning for development in the region. Though the Commission's determination that a development is consistent with the RPP does not in itself determine that the probable benefit of a development is greater than its probable detriment (or that the Commission has determined that there

is any particular benefit or detriment associated with that development), the Commission may factor into its benefits/detriments determination those considerations identified through its RPP review and analysis, in addition to any other regional benefits, detriments, concerns or impacts within the broad purview of the Commission under the Act that are associated with the specific circumstances of the project.

This framework is intended to vertically align local and regional planning and regulatory efforts to maximize the region's ability to achieve common planning and development goals.

WAIVER AND FLEXIBILITY

When special circumstances warrant, and upon the request of the project applicant, the Commission may waive full and literal compliance or consistency with any specific RPP goal or objective, or required method, applicable to a project, and otherwise allow a project to meet such goal or objective to the maximum extent feasible, provided the applicant

demonstrates that:

- such waiver will not result in substantial detriment to or substantial derogation from the purposes and values intended to be protected or promoted by such goal or objective, and
- 2. that the intent of the goal or objective will be met through some alternate approach, including appropriate mitigation; and
- 3. that the waiver is necessary to fulfill, protect or promote another compelling regional purpose, goal, objective or

value from the Act or RPP that could not be achieved without such waiver.

In considering the grant of such waiver, the Commission may factor into its decision-making any hardship claimed and demonstrated by an applicant that would render such full and literal compliance or consistency impracticable. In determining such hardship, the Commission will consider, among other things:

1. whether that without the desired relief, full and literal enforcement

- would result in substantial hardship, financial or otherwise, to the project applicant;
- 2. the extent to which
 the claimed hardship is
 specific to the project,
 not generalized in nature,
 and the extent to which
 the hardship might be
 self-created; and
- 3. whether the requested waiver relates directly, and is the minimum relief necessary, to address the stated hardship.

CAPE COD REGIONAL POLICY PLAN

SECTION 9 REGIONAL REGULATORY REVIEW

REVIEW GOALS AND OBJECTIVES

Natural Systems

GOAL	OBJECTIVE
Water Resources To maintain a sustainable supply of high quality untreated drinking water and protect, preserve, or restore the ecological integrity of Cape Cod's fresh and marine surface water resources.	Protect and preserve groundwater quality
	Protect, preserve and restore fresh water resources
	Protect, preserve and restore marine water resources
	Manage and treat stormwater to protect and preserve water quality
	Manage groundwater withdrawals and discharges to maintain hydrologic balance and protect surface and groundwater resources
Ocean Resources To protect, preserve, or restore the quality and natural values and functions of ocean resources.	Locate development away from sensitive resource areas and habitats
	Preserve and protect ocean habitat and the species it supports
	Protect significant human use areas and vistas
Wetland Resources To protect, preserve, or restore the quality and natural values and functions of inland and coastal wetlands and their buffers.	Protect wetlands and their buffers from vegetation and grade changes
	Protect wetlands from changes in hydrology
	Protect wetlands from stormwater discharges
	Promote the restoration of degraded wetland resource areas
Wildlife and Plant Habitat To protect, preserve, or restore wildlife and plant habitat to maintain the region's natural diversity.	Maintain existing plant and wildlife populations and species diversity
	Restore degraded habitats through use of native plant communities
	Protect and preserve rare species habitat, vernal pools, 350-foot buffers to vernal pools
	Manage invasive species
	Promote best management practices to protect wildlife and plant habitat from the adverse impacts of development
Open Space To conserve, preserve, or enhance a network of open space that contributes to the region's natural and community resources and systems.	Protect and preserve natural, cultural, and recreational resources
	Maintain or increase the connectivity of open space
	Protect or provide open space appropriate to context

Built Systems

GOAL	OBJECTIVE
Community Design To protect and enhance the unique character of the region's built and natural environment based on the local context.	Promote context sensitive building and site design
	Minimize the amount of newly disturbed land and impervious surfaces
	Avoid adverse visual impacts from infrastructure to scenic resources
Coastal Resiliency To prevent or minimize human suffering and loss of life and property or environmental damage resulting from storms, flooding, erosion, and relative sea level rise, including but not limited to that associated with climate change.	Minimize development in the floodplain
	Plan for sea level rise, erosion, and floods
	Reduce vulnerability of built environment to coastal hazards
Capital Facilities and Infrastructure To guide the development of capital facilities and infrastructure necessary to meet the region's needs while protecting regional resources.	Ensure capital facilities and infrastructure promote long-term sustainability and resiliency
	Coordinate the siting of capital facilities and infrastructure to enhance the efficient provision of services and facilities that respond to the needs of the region
Transportation To provide and promote a safe, reliable, and multi-modal transportation system.	Improve safety and eliminate hazards for all users of Cape Cod's transportation system
	Provide and promote a balanced and efficient transportation system that includes healthy transportation options and appropriate connections for all users
	Provide an efficient and reliable transportation system that will serve the current and future needs of the region and its people
Energy	Support renewable energy development that is context-sensitive
To provide an adequate, reliable, and diverse supply of energy to serve the communities and economies of Cape Cod.	Increase resiliency of energy generation and delivery
	Minimize energy consumption through planning and design (energy efficiency and conservation measures)
Waste Management To promote a sustainable solid waste management system for the region that protects public health, safety, and the environment and supports the economy.	Reduce waste and waste disposal by promoting waste diversion and other Zero Waste initiatives
	Support an integrated solid waste management system
Climate Mitigation To support, advance and contribute as a region to the Commonwealth's interim and long-term greenhouse gas reduction goals and initiatives, including a statewide net zero carbon target by 2050.	Promote low or no carbon transportation alternatives and technologies
	Promote low or no carbon technologies for building energy use, including appliances, lighting, and heating, ventilation and cooling (HVAC) systems
	Promote carbon sequestration and other emissions removal practices and technologies as appropriate to context
	Promote low or no carbon energy generation technologies as appropriate to context

Community Systems

GOAL	OBJECTIVE
Cultural Heritage To protect and preserve the significant cultural, historic, and archaeological values and resources of Cape Cod.	Protect and preserve forms, layouts, scale, massing, and key character defining features of historic resources, including traditional development patterns of villages and neighborhoods Protect and preserve archaeological resources
	and assets from alteration or relocation Preserve and enhance public access and rights to and along the shore
	Protect and preserve traditional agricultural and maritime development and uses
Economy To promote a sustainable regional economy comprised of a broad range of businesses providing employment opportunities to a diverse workforce.	Protect and build on the Cape's competitive advantages
	Use resources and infrastructure efficiently
	Foster a balanced and diverse mix of business and industry
	Encourage industries that provide living wage jobs to a diverse workforce
	Expand economic activity and regional wealth through exports, value added, import substitution, and local ownership
Housing To promote the production of an adequate supply of ownership and rental housing that is safe, healthy, and attainable for people with different income levels and diverse needs.	Promote an increase in housing diversity and choice
	Promote an increase in year-round housing supply
	Protect and improve existing housing stock
	Increase housing affordability

Regional Performance Measures SECTION 10 REGIONAL PERFORMANCE MEASURES CAPE COD REGIONAL POLICY PLAN

PERFORMANCE MEASURES

This RPP identifies performance measures to be tracked over time. Changes in these measures will help illustrate whether the region is moving toward the RPP's vision for the future as a region of vibrant, sustainable, and healthy communities, and protected natural and cultural resources.

While there are hundreds of different data points and measures that could show whether the region is making progress toward this vision, nine performance measures were chosen that measure progress across the systems that are critical to meeting the goals and the vision of this plan. The measures are often indicative of more than one facet of the region's systems and were chosen because measuring them is also achievable based on available data. Though ideally these measures will show positive progress over time, tracking them can also identify areas where additional resources are needed to make progress. The Commission will work to make this data accessible.

Each performance measure is related to at least one of the systems identified in this RPP. Several performance measures, however, relate to multiple systems. The circles indicate which systems the performance measure relates to and supports.

Systems

Issue-specific plans adopted in conjunction with the RPP will also have a more comprehensive set of measures for achieving that plan's goals and objectives. For example, the Comprehensive Economic Development Strategy includes numerous additional performance measures focused on the health of the regional economy, while the Regional Transportation Plan update includes specific performance measures for meeting the goals of the RTP. Though separate from the RPP, these efforts align with and support the RPP goals.

PROTECTED HABITAT

Number of acres of protected BioMap2 Core habitat: Preserving the natural environment and habitats is essential to the region's environmental and economic resilience. An increase in the number of acres of protected BioMap2 Core habitat will show progress towards safeguarding the Cape's valuable natural environment.

DRINKING WATER

Nitrogen concentration in public drinking water wells: Clean drinking water is critical to any population's quality of life and well-being. Nitrogen is often used as an indicator of drinking water quality. The Commission's established nitrogen loading concentration of 5 parts per million is below the established federal maximum contaminant level of 10 parts per million to ensure the region's high-quality drinking water is maintained. A decrease in the concentration of nitrogen in public supply wells will show progress toward increasing protection of public health.

SIDEWALK NETWORK

Parcels connected to the sidewalk network: In order to achieve the vision of a region defined by vibrant and healthy communities, residents and visitors must be able to move through the area safely and efficiently and not solely using vehicles. Increasing the number of parcels connected to the sidewalk network, where appropriate, will indicate an increased ability for more people to travel around the region without getting in their cars, and getting people outside and walking around is also a key contributing factor to creating a vibrant community.

COASTAL WATER

Nitrogen concentrations in embayments: The health of marine water ecosystems depends on the quality of coastal waters; the Cape's economy is tied to its quality of life, and thus, to the quality of its coastal and other natural resources. Nitrogen travels through groundwater to coastal embayments and, in excess, results in degraded water quality. Decreased concentrations of nitrogen at monitoring stations in each of the region's coastal embayments is indicative of water quality improvement.

CAPE COD REGIONAL POLICY PLAN

SECTION 10 REGIONAL PERFORMANCE MEASURES

HISTORIC RESOURCES

Number of additional or updated historic structure inventory forms: The historic character of the Cape plays a huge role in attracting visitors and residents to the region, however many of these critical historic resources are unprotected. The first step towards protecting these historic resources is inventorying them, either for the first time or conducting more detailed inventories of previously inventoried structures. An increase in the number of historic resource inventories will show progress toward greater protection of these unique structures.

ACTIVITY CENTERS

Activity center evolution: The 2018 RPP utilized GIS analysis to identify existing centers of activity across the region. The Commission will review changes in the health, wealth, and economic resilience of existing centers of activity over time.

HIGH-WAGE JOBS

Share of employment within high-wage industries: Year-round employment opportunities with good wages can be difficult to find on the Cape. This measure shows how many Cape Cod jobs are in high-wage industries. An increase in the employment opportunities in high-wage industries will show a shift away from an economy primarily focused on the tourism industry, with low-paying, seasonal jobs, and towards an economy that can support a more robust yearround population. An increase in the share of employment within high-wage industries will also reflect changes in the physical infrastructure and regulations necessary to support these companies.

HOUSING DIVERSITY

Housing diversity: Housing affordability is a large challenge to the yearround population and is compounded by the fact that over 80% of the Cape's housing stock is detached single-family homes. An increase in housing diversity in terms of housing type, size, and rental vs. ownership units, will show that there are more opportunities for people of different ages and economic backgrounds to live on the Cape.

FLOODPLAIN

DEVELOPMENT

Changes in floodplain development: Climate change and sea level rise are threats posing a significant challenge for the Cape. A decrease in development within the floodplain, adapting development through new codes or regulations, or additional protected lands in strategic areas will help protect the environment and the population of the region and ensure its viability and sustainability for the next several decades.

GREENHOUSE GAS EMISSIONS

Total metric tons of carbon dioxide equivalent (MTCO2e) of greenhouse gas emissions: Greenhouse gas emissions are contributing to climate change which threatens the natural, built and community systems on Cape Cod. The Commission developed a baseline greenhouse gas emissions inventory for the region. The inventory estimates emissions from Barnstable County for the Stationary Energy, Transportation, **Industrial Processes and Product** Use, Agriculture, Land Use, Land Use Change, Forestry, and Waste sectors. The inventory is reproducible through a documented methodology, and changes in each identified sector's emissions can be tracked. Decreases in emissions will contribute to slowing the rate of climate change.

Recommended actions in the 2018 RPP that the Commission commits to undertake over the next five years include both planning and regulatory efforts to address the major challenges identified in Section 5 of the Plan. These actions are organized around the Natural Systems, Built Systems, and Community Systems identified in Section 4 as well as other actions needed to align the Commission's planning and

regulatory efforts. Many of these actions will require collaboration and partnerships at various levels of government and with non-governmental organizations, participation by committees and stakeholders that currently support the Commission's efforts, communication and coordination with private sector industries and businesses, and substantial public input in order to be achieved.

REGIONAL PLANNING ACTIONS

NATURAL SYSTEMS

Identify Priority Lands for Future Water Supply Development

Conduct a GIS-based analysis of lands suitable for the development of additional and/or replacement water supplies for Cape communities. Work with

communities to establish areas of land for priority open space acquisition and protection for the purposes of water supply. In concert with identifying future needs and planning for future well development to replace existing wells, develop a water budget that focuses on identifying future needs to accommodate anticipated growth and includes strategies for reducing per capital water usage. Prepare a drinking water supply assessment

for water quality including consideration of emerging contaminants.

Support Water Quality Planning in Priority Watersheds

Continue to support
watershed planning and
implementation in priority
watersheds identified in
the 208 Plan Update and
subsequent implementation
reports. Support should
be provided in response to

requests for Watershed Team technical assistance and through regional efforts that promote the analysis and integration of embayment water quality data and technology performance data into local decision-making processes.

Update and Expand Understanding of Fresh Water Resources Data

Compile available fresh water resources water quality data into a regional database.

Seek funding to update the Cape Cod Ponds and Lakes

Atlas to reflect current water quality data collected by the Ponds and Lakes

Stewardship Program.

CAPE COD REGIONAL POLICY PLAN

SECTION 11 RECOMMENDED ACTIONS

BUILT SYSTEMS

Develop a Regional Capital Infrastructure Plan to Support Sustainable Economic Development

Prepare a Regional Capital
Infrastructure Plan, in
accordance with the RPP's
Growth Policy, Regional Vision,
and Goals and Objectives,
that supports the human
population and economies on
Cape Cod.

Update the Cape Cod Regional Transportation Plan

Complete the four-year update to the Cape Cod Regional Transportation Plan (RTP) to establish a framework that supports the Regional Growth Policy, Vision, and Goals and Objectives adopted in the 2018 RPP.

The RTP should strategically utilize available federal and state funds to provide a safe, reliable, and multimodal transportation system that effectively serves the region and its people. The RTP should prioritize investments

that improve access to and mobility within compact, mixed-use activity centers including investments in public transportation.

Support communities in the implementation of Complete Streets projects and other projects that support the vision of the RTP.

Climate Change Response, Readiness, and Mitigation

Encourage and engage communities to better understand regional greenhouse gas emissions and identify opportunities for mitigation.

- Develop an estimated baseline of greenhouse gas emissions for the region using available models and data.
- Encourage more
 communities to seek
 Green Communities
 designation, which would
 facilitate greater funding
 opportunities for municipal
 energy efficiency and
 renewable energy initiatives
 and participation in the
 Community Rating System
 to reduce insurance costs.

- Conduct GIS screening analysis of potential electric vehicle charging station locations.
- Conduct a GIS analysis
 to identify appropriate
 potential sites for
 development of utility
 scale solar photovoltaic
 arrays or energy storage
 facilities (with an emphasis
 on "grayfield" sites outside
 of densely populated
 areas) to encourage
 development of on-site
 renewable energy to offset
 line losses associated
 with electricity supplied
 from the utility grid.

Continue Coastal Hazard Mitigation and Climate Adaptation Planning

Support and engage communities in coastal hazard mitigation and climate adaptation planning to increase the region's resilience to severe storm events and sea level rise consisting of the following efforts:

Continue to develop
 and implement a coastal
 resilience scenario planning
 tool to assist communities
 in understanding the
 costs/benefits and

- ecosystem services provided by various coastal adaptation strategies;
- Continue to provide technical assistance to communities through the State's Municipal Vulnerability Preparedness and Multi-Hazard Mitigation planning programs to identify coastal hazards, critical facilities and infrastructure, and mitigation and/or adaptation strategies;
- Consider use of planning and/or regulatory tools available through the
 Act and Commission

SECTION 11 RECOMMENDED ACTIONS

CAPE COD REGIONAL POLICY PLAN

regulations that could be implemented in the event of a disaster to relocate development outside of hazard areas;

- Provide design guidance on elevating structures and floodproofing/ other techniques in flood hazard areas;
- Support analysis and planning at the regional and local level to advance and coordinate management of coastal resources that addresses the natural flow and function of sediment transport

COMMUNITY SYSTEMS

Develop a Regional Housing Plan

Develop a community housing plan for the purpose of addressing housing supply, affordability, and availability in the region. The regional housing plan should identify regional, sub-regional, and town-specific housing supply goals and appropriate areas for housing development, in particular multi-unit development. The regional housing plan should also set out regional, sub-regional or town-specific policies, actions and strategies for furthering

the goals of the plan, including how to foster infrastructure investment to support an increase in housing supply. As a component of the regional housing plan, examine the relationship between affordable housing needs generated by the creation of new, low-wage jobs.

Update the Comprehensive Economic Development Strategy

Complete the five-year update to the Cape Cod Comprehensive Economic Development Strategy (CEDS) to achieve the Regional Growth Policy, Vision, and Goals and Objectives adopted in the 2018 RPP. The CEDS should be developed through an intensive public engagement process and include a set of priority issues to address over the next five years. Specific priority projects and an implementation action plan should be adopted, along with a program for evaluating progress.

Update Local Comprehensive Plan Regulations

Encourage more towns to prepare or update local comprehensive plans that

are consistent with the Act, Regional Growth Policy, Vision, and Goals and Objectives of the 2018 RPP. Streamline regulations governing the form, content, and review of local comprehensive plans while ensuring that minimum requirements under the Act are met. Continue to provide technical assistance to towns in preparing local comprehensive plans and assist towns in making changes to local development bylaws to ensure consistency with the local comprehensive plan. Provide a template on

the required elements of a local comprehensive plan and local capital plan.

Improve and Update Historic Inventories

Historic Inventories
Support the work of local
historic committees to
complete and/or update
inventories of historic and
cultural resources through
GIS mapping and technical
assistance, and work with
Cape communities to adopt
zoning changes that provide
incentives to preserve and reuse historic structures.

Continue to Develop Land Use Decision Support Tools

Building upon tools developed for and used in several major planning initiatives described in Section 7, such as the 208 Plan Update and the Resilient Cape Cod project, the Commission will continue to develop a suite of interactive land use decision support tools to assist local officials and stakeholders in visualizing the form and potential impacts of alternative development scenarios on the environment. These tools could be used at a variety of scales ranging from an individual site or

CAPE COD REGIONAL POLICY PLAN

SECTION 11 RECOMMENDED ACTIONS

neighborhood to an entire community and could analyze a variety of resource impacts including wellhead protection, water use, impervious surfaces, or parking requirements generated by different development scenarios.

Spatial Fiscal Impact Model

The Commission is developing a spatial fiscal impact model that approximates the cost to a town of a certain type of development on a given parcel based on the parcel's attributes, such as the land use and location. Using GIS, this model will allow the user to analyze the role of location in estimating the

costs or revenues to a town from a development. The model may also be used to approximate the different fiscal impacts to the town for different development types at the same location. This can support better land use and development policies by highlighting the different impacts of various types of development, as well as help to identify where infrastructure improvements may be most effective.

Zoning Analysis Tool
The Commission currently
has a three-town pilot
project with OpenCounter, an
intuitive web-based zoning
tool designed to make local

regulations accessible to the public. OpenCounter reveals parcel-level zoning details, including existing uses, overlay and planned development districts. This helps applicants understand zoning challenges and opportunities for projects before engaging with municipal staff. The three towns in the pilot program are Mashpee, Barnstable, and Yarmouth. These towns were chosen because they are contiguous, and each has a unique commercial base, population, and geographic size. Next steps after a successful pilot would be to bring on more interested communities and create a single portal.

By better understanding what people are trying to develop on the Cape, the Commission can help identify where changes in land use policies may be most effective in supporting market need and can guide development to appropriate locations.

Coordinate Annual Regional Planning Forum

Continue to coordinate and facilitate information sharing, education, and collaboration across the region by hosting the annual One Cape Summit. Originally launched in 2014 to chart progress on development of the Cape Cod 208 Plan Update, it has become a forum for

community activists, industry practitioners, municipal staff and appointed board members, and local elected leaders to discuss regional issues related to the unique environment and economy of Cape Cod. In recent years, the Summit expanded to highlight the importance of environmental, community, and economic resilience. To support ongoing education for better collaboration on challenging issues, the Commission will continue to hold this event and will seek to bring in a range of local, regional, and national speakers on pressing topics impacting the region.

CURRENT DECISION SUPPORT TOOLS

GeoPlanner

GeoPlanner is an online tool that allows a user to "paint" different types of development on a particular area, allowing a comparison of the impacts from different land uses. This tool is particularly helpful early in the planning stages of a project or consideration of a potential zoning change on a particular area.

Impact 3D

Using ArcGIS Pro, **Impact 3D** allows users to construct building massings with assigned land uses in a three-dimensional environment. Impact 3D helps visualize and compare the impacts of potential development scenarios with each other and on the existing environment.

Envision Tomorrow

Envision Tomorrow also utilizes GIS but operates in a two-dimensional environment to perform detailed calculations of the impacts of different types of development the user "paints" onto a certain area. Envision Tomorrow was used in the early stakeholder workshops on the RPP update and includes a feature that allows a user to estimate the feasibility of different development scenarios based on construction and other costs.

REGIONAL REGULATORY ACTIONS

In addition to the previous planning actions, the following are priority regional regulatory actions intended to align the Commission's regulatory program with the Growth Policy, Vision, and Goals and Objectives in the 2018 RPP.

Consider Development of Regional Impact Threshold Revisions and Other Amendments to the Commission's Code of Regulations

Consider potential changes to mandatory DRI review thresholds to encourage residential and mixed-use projects in Community Activity Centers, for research and development and light manufacturing in

Industrial Activity Centers, and to support resource protection in Natural Areas.

■ More generally, review and update the Commission's Chapter A/ DRI Enabling Regulations (including Section 3 containing the mandatory DRI review thresholds), where such Regulations have not recently been comprehensively reviewed for form or content.

Such review may include adoption of new or additional thresholds, or the removal or revision of certain existing thresholds.

■ Amend Chapters in the Code of Regulations to conform to language and processes set out in the 2018 RPP.

■ Amend Chapter D/ Development Agreement Regulations to better reflect Section 14 of the Cape Cod Commission Act.

Revise Regional Design Guidelines

Expand upon Technical Bulletins 96-001 - Designing the Future to Honor the Past: Design Guidelines for Cape Cod, and the Addendum to Technical Bulletin 96-001 -Contextual Design on Cape

Cod: Design Guidelines for Large-Scale Development to provide additional guidance to applicants on how to meet the Community Design Goals and Objectives in the 2018 RPP based on the Cape Cod Placetypes and to serve as model guidelines for local design review. Assist towns with the adoption of design guidelines, village center zoning, and/or form-based regulation as appropriate.

Amend Technical Bulletins to Better Respond to Climate Change

Amend energy, transportation, and other relevant technical bulletins to include methods that reflect the findings of the Climate Change Response, Readiness, and Mitigation action.

December 2018; amended effective March 30, 2021

Barnstable County Ordinance #19-01, #21-03
