

# MASHPEE ROTARY

## CORRIDOR STUDY PROJECT SUMMARY

### **Study Goals: Reducing Congestion, Improving Safety and Accommodating All Users**

**Study Objectives:** Identify and analyze potential improvements through a community-driven process, and develop concepts that are consistent with study goals and meet the local and regional transportation needs.

**Background:** The Mashpee Rotary is a five-leg, major regional transportation node with the intersections of Route 28, Route 151, Great Neck Road North, and Great Neck Road South. The Mashpee Rotary and its approaches have been identified as a priority for investigation due to congestion and safety issues. Also of key concern is accommodation for all road users including motorists, pedestrians, bicyclists, and transit users. This study will serve as a continuation of the previous Route 28 study in Eastern Mashpee that included the Route 130/Route 28 intersection through the Orchard Road/Route 28 intersection.

### **Project Facts:**

- Mashpee Rotary accommodates over 20,000 vehicles per average summer day
- Mashpee Rotary is identified as a high crash location according to the Massachusetts Department of Transportation and the Cape Cod Commission
- Mashpee Rotary does not currently provide accommodations for pedestrians or bicyclists

### **Project Scope and Schedule:**

- Project Initiation & Existing Conditions Review - Winter 2019
- Public Meeting #1 & Stakeholder Coordination - Winter/Spring 2019
- Concept Development and Refinement - Spring 2019/Summer 2019
- Public Meeting #2 & Stakeholder Coordination - Summer 2019
- Draft and Final Report - Fall 2019
