Hello Jeffrey,

As requested, attached please find a listing of hazardous materials presently used at the Cape Cod Potato Chip Factory. As you'll see, the document also indicates that no additional hazardous materials are anticipated to be used as a result of the project.

Please let me know if you have any questions.

Thank you,
Liza

Cape Cod Potato Chips Hyannis, MA Hazardous Materials Summary May 2017

Hazardous Materials Presently Used On-Site

- Sulfuric Acid
 - Used for pH neutralization at wastewater treatment
 - Max on site at any time: 700 lbs
- Sodium Hydroxide
 - Used for pH neutralization at wastewater treatment
 - Max on site at any time: 500 lbs
- Potassium Hydroxide
 - 30-40% Mixture used for process equipment cleaning and sanitizing
 - Max on site at any time: 300 gallons

Hazardous Waste Generated at the Site

- Lab Packs – Titration test remnants
 - Max on site at any time: Two, 55 gallon drums

Details

The majority of the hazardous materials stored on site are used for pre-treatment purposes at our on-site wastewater treatment facility, which was installed and brought online late 2014. Additionally, there are some cleaning chemicals that are used in the production process that have diluted hazardous chemicals within them. However, these chemicals are so low in volume that they are well below any regulated reporting thresholds.

Directly related to this project, we do not anticipate any additional hazardous materials present at the facility with operations and production volume remaining the same. All safe storage practices will be maintained with the new building design and layout, along with improvements where applicable.
