

What's YOUR vision for the future of transportation on Cape Cod?

From reconstructing intersections to installing new roundabouts to adding traffic lights, sidewalks, and bike paths, transportation planning is a lengthy and robust process involving state and local transportation planners and the public.

Each year, the Cape Cod Metropolitan Planning Organization (MPO) and the Cape Cod Joint Transportation Committee (CCJTC) meet publicly to review the development of the Transportation Improvement Program (TIP) and the Unified Planning Work Program (UPWP), plans that set the course for transportation work across the region.

Transportation Improvement Program (TIP)

A five-year list of transportation infrastructure projects funded by state and federal sources. Typical projects include roadway and intersection reconstruction, shared-use path construction, and new buses to support regional transit service.

Unified Planning Work Program (UPWP)

A list of planning activities to be performed by Cape Cod Commission transportation staff over the next year. Typical projects include data collection, safety studies, and bicycle planning. Projects seek to address safety, congestion, and climate resiliency issues for all transportation modes.

The process for the development of these programs for the upcoming federal fiscal year begins in January. Project selections occur in March, and the MPO releases draft documents in April for public comment. Following the public comment and review period, the MPO finalizes and votes to approve the documents in May.

Help shape the future of transportation and road work projects on Cape Cod.
